SUPER-SIZE GSW 40-L
Sectional Garage Doors

GARAGE DOORS FROM 6-8m WIDE
HIGH PERFORMANCE, MOTORIZED
SOLUTION FOR SUPER WIDE GARAGES

Extremely robust and highly insulating
Super-Size doors are special
From the outside our Super-Size doors are indistinguishable from our “normal” sized garage doors - the same stunning profiles, the same attractive windows and finishes. They are just wider - Super-Size doors start above 5.5m (18’0”) wide and reach 8.0m (26’3”) wide in a single span.

Opening a Super-Size door is simple too - all are power operated by a remote control motor.

It is from the inside that Super-Size doors differ. The weight of a complete door at these sizes is considerable and safe operation is paramount. Consequently doors have up-rated fittings for all load bearing elements and the lifting mechanism is motor driven with torsion spring assistance. A monitored safety edge ensures the door stops and reverses should it encounters an obstruction. 

Teckentrup sectional doors meet all the safety requirements and provisions of EN 13241-1

Solid 40mm thick panels
The 40mm thick insulated panels of the Super-Size door are strong, rigid and provide excellent thermal and acoustic performance. Intermediate strips create a thermal barrier that is very effective in reducing heat transmission saving on the energy needed to maintain a pleasant ambient temperature inside the garage.

This view from the inside shows the standard configuration of front mount torsion spring lifting gear, motor and controls.
Low Noise Operation
Robust roller blocks made of galvanized steel and ball bearing runner rails guarantee a long service life and low noise operation.

Unlimited combinations, well almost!
Their are literally hundreds of possible combinations of texture and finish making it easy to adapt the door to suit your home. Each profile is available in the textured finishes shown above plus all Trend colours and almost all RAL colours.

Doors are supplied as standard in traffic white embossed wood grain on the outside (similar to RAL 9016) and grey white embossed stucco on the inside (RAL 9002).

Golden Oak, Rosewood and Dark Oak are durable wood effect laminates that match well with UPVC doors and windows. Trend colours are a selection of popular colours, however almost all RAL colours are available as an option - just ask.

Trend or RAL?
Trend colours are selected shades that have generally come to be considered as the most popular colours for garage doors. The colours are held as coated steel from which door panels are made to order.
Safety Edge Mechanism
Doors are factory fitted with a safety edge mechanism which stops the door if it comes into contact with an obstacle.

Direct Drive
Big doors need power and our direct drive motors are definitely up to the job! Intelligent control ensures safe operation at all times.

Side Protection
A lateral guard prevents a hand from being accidentally caught between the frame and the runner rail.

Finger pinch protection outside/inside
Patented finger pinch protection for outside and inside of the door.

Weather Strips
The door is also has a weather strip at the sides, top and also between the individual sections across the entire width.

Floor Seal
A rot-proof bottom weather strip made of elastic EPDM rubber profile sits against the floor and will compensate for minor variations in floor level to provide an improved barrier to debris and draughts.

If the colour you require is not available as a Trend colour, we are able to coat our standard panels to a RAL colour. For doors coloured in this way, doors are made and cut to size from white panels and then sprayed to the required colour.

Make the most of light
Scratch-resistant, 16mm double glazed, easy-clean windows in attractive designs allow natural light into your garage.

Each style is available with clear, frosted or opaque glazing. The window units are fitted with a polyurethane frame that is coloured to match or compliment the panel colour of the door.
