

Fitting a glazing unit

required components:

- exterior frame
- double glazing
- interior frame

In addition you need the following screws:

1. For all Georgian panels please use the screw 3,5 x 40 mm with material no.: 132192
2. For all ribbed panels 136431 please use the screw 3,5 x 45 mm with material no.: 132193

All types of glazing must be fastened with the cordless screwdriver "Speed Level 2 / Level 6" (see picture below)

Fitted with a TX 10 bit

Step 1

Remove all glazing units

Step 2

Centralise the new window front and glazing unit, ensuring that the glazing is within the recess of the window front.

Step 3

Fit window back tightening screws in sequence
