1. About this installation and operating manual

1.1 Storage and circulation of the installation and operating manual

Read this installation and operating manual carefully and completely before installation, commissioning and operation and at all times at the place of use. Follow all warnings and safety instructions. Keep this installation and operating manual accessible to all users at all times at the place of use. A replacement for the installation and operating manual can be downloaded from SOMMER at:

www.sommer.eu

During the transfer or resale of the operator to third parties the following documents must be passed on to the new owner:

- EC Declaration of Conformity
- Handover protocol and inspection book
- This installation and operating manual
- Proof of regular maintenance, testing and care
- Documents recording retrofitting and repairs

1.2 Important for translations

The original installation and operating manual was written in German. The other available languages are translations of the German version. You can get the original installation and operating manual by scanning the QR code:

https://www.teckentrup.biz/downloadcenter/

1.3 Description of the product type

The operator has been reading to state-of-the-art technology and regulations and is subject to the Machinery Directive (2006/42/EC). The operator is fitted with a radio receiver. Optionally available accessories are also described. The version can vary depending on the type. This means the use of accessories can vary.

1.4 Target groups of the installation and operating manual

The installation and operating manual must be read and observed by everyone assigned with one of the following tasks:

- Unloading and in-house transport
- Unpacking and installation
- Initial operation
- Setting
- Use
- Maintenance, testing and care
- Troubleshooting and repairs
- Disassembly and disposal

1.5 Explanation of warning symbols and notes

The warnings in this installation and operating manual are used as follows

⚠️ Signal word

Type and source of hazard
Consequences of the hazard
Preventing/avoiding the hazard

The hazard symbol indicates the hazard. The signal word is linked to a hazard symbol. The hazard is divided into three categories depending on its danger level:

DANGER

WARNING

CAUTION

This leads to three different hazard categories:
1. About this Installation and Operating Manual

**DANGER**
Describes an immediate danger that leads to serious injury or death.
Describes the consequences of the danger to you or other persons.
► Follow the instructions for avoiding or preventing the danger.

**WARNING**
Describes a potential danger of serious injury or death.
Describes the potential consequences of the danger to you or other persons.
► Follow the instructions for avoiding or preventing the danger.

**CAUTION**
Describes a potential danger of a hazardous situation.
Describes the potential consequences of the danger to you or other persons.
► Follow the instructions for avoiding or preventing the danger.

The following symbols are used for notes and information:

**NOTE**
Describes additional information and useful notes for correct use of the operator without endangering persons.
If it is not observed, property damage or faults to the operator or door may occur.

**INFORMATION**
Describes additional information and useful tips.
Functions for optimum usage of the operator are described.

**INFORMATION**
This symbol indicates that all operator components that have been taken out of service must not be disposed of with household waste, as they contain hazardous substances. The components must be disposed of correctly at an authorised recycling centre. The local and national regulations must be observed.

**INFORMATION**
This symbol indicates that all old accumulators and batteries must not be disposed of with household waste. Old accumulators and batteries contain hazardous substances. These must be disposed of properly at municipal collection points or in the containers provided by dealers. The local and national regulations must be observed.

The following notes are used in the figures and text:

- Disconnect the operator from the mains voltage.
- Connect the operator to the mains voltage.
- Symbol refers to factory settings.
- Symbol refers to a Wi-Fi-enabled device, such as a smartphone.

1.6 Special warnings, hazard symbols and mandatory signs

To specify the source of danger more precisely, the following symbols are used together with the above-mentioned hazard symbols and signal words.
Follow the instructions to prevent a potential hazard.

**DANGER**
Danger due to electric current!
Contact with live parts may result in electric current flowing through the body. Electric shock, burns or death will result.
► Intallation, testing and replacement of electrical components must be carried out by a trained electrician.
1. About this Installation and Operating Manual

**WARNING**

Danger of falling!
Unsafe or defective ladders may tip and cause serious or fatal accidents.
- Use only a non-slip, stable ladder.

**WARNING**

Danger of trapped persons!
Persons may be trapped inside the garage. If trapped persons cannot free themselves, severe injury or death may result.
- If there is no second entrance to the garage, you must have a release lock or a Bowden wire for unlocking from the outside installed. This can be used to free persons who are not free themselves.

**WARNING**

Danger due to projecting parts!
Parts must not project into roads or public footpaths. This also applies while the door is moving. Persons and animals may be seriously injured.
- Keep public roads and footpaths clear of projecting parts.

**WARNING**

Danger due to falling parts!
Parts of the door may become detached and fall. If persons or animals are hit, this may cause serious injury or death.
- The door must not bend, rotate or twist when you open or close it.

**WARNING**

Danger of entrapment!
Persons and animals in the movement area of the door may be trapped and pulled along with the door. Severe injuries or death may result.
- Keep clear of the moving door.

**WARNING**

Danger of crushing and shearing!
If the door moves and there are persons or animals in the movement area, crushing and shearing injuries may be caused by the mechanism and safety edges of the door.
- Never put your hand near the door or near moving parts when the door is moving.

**WARNING**

Danger of tripping and falling!
Unsafely positioned parts such as packaging, operator parts or tools may cause trips or falls.
- Keep the installation area free of unnecessary items.

**WARNING**

Danger due to optical radiation!
Looking into an LED at short range for an extended period may cause optical glare. This will temporarily reduce vision. This may cause serious or fatal injury.
- Never look directly into an LED.

**WARNING**

Danger due to hot parts!
After frequent operation, parts of the motor carriage or the control unit may become hot. If the cover is removed and hot parts are touched, they may cause burns.
- Allow the operator to cool down before removing the cover.

---

www.garagedoorsonline.co.uk  01926 463888
1. About this Installation and Operating Manual

The following mandatory signs inform the user that actions are required. The requirements described must be complied with.

**WARNING**
Risk of eye injury! Chips flying when drilling may cause serious injuries to eyes and hands. ► Wear safety glasses.

**WARNING**
Risk of injury in the head region! Impact with suspended objects may cause serious abrasions and cuts. ► Wear a safety helmet.

**CAUTION**
Risk of injury to hands! Rough metal parts may cause abrasions and cuts when picked up or touched. ► Wear safety gloves.

1.7 Information regarding the depiction of text

1. Stands for direct ions for an ab ion
   ⇒ Stands for the ree its of the ab ion
   Lists are own as a list of ab ions
   - List 1
   - List 2

1, A Item number in the figure refers to a number in the tek.

Important tek items for example in direct ions for ab ions are emphasized in bold type. Referene s to other b apers or e b ions are in bold type and set in "quotation marks."

1.8 Intended use of the operator

The operator is intended ex ly to open and close doors. Any other use does not constitute intended use. The manufacturer accepts no liability for damage resulting from other than the intended use. The user bears the sole responsibility for any risk involved. It also voids the warranty.

Any changes to the operator must be made with original SOMMER a ries only and only to the ek ent de ed.

Doors automated with this operator must comply with all id international and dom b and s and regulations. Thee int ude EN 12604, EN 12605 and EN 13241-1.

The operator may only be use d:
- if the EC Deation of Conformity has been ed for the door
- if the CE mark and the plate for the door have been attached to the door
- if the handoo r n pro t oot and the ins ec ion book have been o mpleted and are able
- the int alation and operating manuals for the operator and the door are pre nt.
1. About this Installation and Operating Manual

- as specified in this Installation and Operating Manual
- in good technical condition
- with attention to safety and hazards by trained users

1.9 Improper use of the operator

Any other use or additional use that has not been described in chapter “1.8 Intended use of the operator” constitutes improper use. The user bears the sole responsibility for any risk involved.

The manufacturer’s warranty will be voided by:
- damage caused by other use and improper use
- use with defective parts
- unauthorised modifications to the operator
- modifications and non-approved programming of the operator and its components

The door must not be part of a fire protection system, an escape route or an emergency exit that automatically closes the door in the event of fire. Installation of the operator will prevent automatic closing. Observe the local building regulations.

The operator may not be used in:
- areas with explosive atmospheres
- very salty air
- aggressive atmospheres, including chlorine

1.10 Qualifications of personnel

People under the influence of drugs, alcohol, or medications that affect their ability to react may not work on the operator.

After installation of the operator, the person responsible for the installation of the operator must complete an EC Declaration of Conformity for the door in accordance with Machinery Directive 2006/42/EC and apply the CE mark and a type plate to the door.

The user must be informed that other use or modifications on the operation of the operator, its dangers as well as the emergency release may only be performed by a qualified specialist.

The qualified specialist must be familiar with the following standards:
- EN 13241-1 Doors and gates – Product standard
- EN 12604 Doors and gates – Mechanical aspects – Requirements
- EN 12605 Doors and gates – Mechanical aspects – Test methods
- EN 12445 and EN 12453 – Safety in use of power-operated doors

A qualified specialist is a person commissioned by the installer. The qualified specialist must instruct the user:
- on the operation of the operator and its dangers
- on the handling of the manual emergency release
- on regular maintenance, testing, and care which the user can carry out

The user must be informed about which work may only be performed by a qualified specialist:
- installation of accessories
- settings
- regular maintenance, testing, and care
- troubleshooting and repairs

The following documents for the door must be handed over to the user:
- EC Declaration of Conformity
- handover protocol and inspection book
- the installation and operating manuals for the operator and the door

Qualified specialist for installation, commissioning and disassembly

This installation and Operating Manual must be read, understood and carried out by a qualified electrician who installs or performs maintenance on the operator. Work on the electrical system and live parts must be performed by a trained electrician in accordance with EN 50110-1.

Installation, initial operation and disassembly of the operator may only be performed by a qualified specialist.

The following are available:
- handover protocol for the operator
- EC Declaration of Conformity

http://som4.me/konform
1. About this Installation and Operating Manual

1.11 For the user

The user must ensure that the CE mark and the type plate has been attached to the door.

The following documents for the door must be handed over to the user:

- the installation and operating manuals for the operator and the door
- inspection book
- EC Declaration of Conformity
- handover protocol

The user must always keep this Installation and Operating Manual at the place of use, ready for consultation and accessible to all users.

The user is responsible for:

- the intended use of the operator
- its good condition
- instructing all users how to use the door and in the associated hazards
- operation
- maintenance, inspection and care by a qualified specialist
- troubleshooting and repair by a qualified specialist

The operator must not be used by persons with restricted physical, sensory or mental ability or who lack experience and knowledge. All users must be specially instructed and have read and understood the installation and operating manual.

Children must never play with or use the operator, even under supervision. Children must be kept away from the operator. Handheld transmitters or other command devices must be given to children. Handheld transmitters must be kept safely stored and protected against unintended and unauthorized use.

The user will observe the accident prevention regulations and the applicable standards in Germany. In other countries, the user must comply with the applicable national regulations.

The guideline "Technical regulations for workplaces ASRA 1.7" of the German committee for workplaces (ASTA) is applicable for commercial use. The guidelines described must be observed and complied with. This applies for the user in Germany. In other countries the user must comply with the applicable national regulations.
2. General safety instructions

2.1 Basic safety instructions for operation

Follow the basic safety instructions listed below. The operator must not be used by persons with restricted physical, sensory or mental capacity or who lack experience and knowledge. All users must be ecially instructed in the installation and operating instructions. Children must never play with or use the operator, even under supervision. Children must be kept clear of the operator. Handheld transmitters or other command devices must be safely stored and protected against unintended and unauthorised use.

**DANGER**

Danger if not observed!
If safety instructions are not observed, serious injury or death may result.
► All safety instructions must be complied with.

**DANGER**

Danger due to electric current!
Contact with live parts may result in electric current flowing through the body. Electric shock, burns or death will result.
► Install all, testing and replacement of electrical components must be carried out by a trained electrician.
► Disconnect the mains plug before working on the operator.
► If an accumulator is recharged, disconnect it from the control unit.
► Check that the operator is not live.
► Secure the operator against being switched on.

**DANGER**

Danger due to use of the operator with incorrect settings or when it is in need of repair!
If the operator is used despite incorrect settings or if it is in need of repair, severe injury or death may result.
► The operator may only be used with the required settings and in the proper condition.
► You must have faults repaired professionally without delay.

**DANGER**

Danger of hazardous substances!
Improper storage, use or disposal of accumulators, batteries and operator components are dangerous for the health of humans and animals. Serious injury or death may result.
► Accumulators and batteries must be stored out of the reach of children and animals.
► Keep accumulators and batteries away from chemical, mechanical and thermal influences.
► Old accumulators and batteries must not be disposed of with household waste. They must be disposed of properly.

**WARNING**

Danger for trapped persons!
Persons may be trapped inside the garage. If trapped persons cannot free themselves, severe injury or death may result.
► Test the operation of the emergency release regularly from inside and if necessary from outside.
► You must have faults repaired professionally without delay.
2. General safety instructions

⚠️ WARNING
Danger due to projecting parts!
Door leaves or other parts must not project into roads or public footpaths. This also applies while the door is moving.
This may cause serious injury or death to persons or animals.
► Keep public roads and footpaths clear of projecting parts.

⚠️ WARNING
Danger due to falling parts of doors!
Actuating the emergency release can lead to uncontrolled door movement if
• springs are weakened or broken.
• the door has not been optimally weight-balanced.
Falling parts may cause a hazard.
Severe injuries or death may result.
► Check the weight balance of the door at regular intervals.
► Pay attention to the movement of the door when the emergency release is actuated.
► Keep clear of the movement area of the door.

⚠️ WARNING
Danger of entrapment!
Persons and animals in the movement area of the door may be trapped and pulled along with the door. Severe injuries or death may result.
► Keep clear of the movement area of the door.

⚠️ WARNING
Danger of crushing and shearing!
If the door moves and there are persons or animals in the movement area, crushing and shearing injuries may be caused by the mechanism and safety edges of the door.
► Only use the operator when you have a direct view of the door.
► All danger zones must be visible during the entire door operation.
► Always keep the moving door in sight.
► Keep persons and animals clear of the range of movement of the door.
► Never put your hand near the door or near moving parts when the door is moving. In particular, do not reach into the moving push arm.
► Do not reach into the ceiling suspension unit when the motor carriage is running along the track.
► Do not drive through the door until it has opened completely.
► Store the handheld transmitter so that unauthorized access, e.g., by children or animals, is impossible.
► Never stand under the opened door.

⚠️ WARNING
Danger due to optical radiation!
Looking into an LED at short range for an extended period may cause optical glare. This may temporarily reduce vision. This may cause serious or fatal accidents.
► Never look directly into an LED.

NOTE
Dispose of all parts in accordance with local or national regulations to avoid environmental damage.
2. General safety instructions

NOTE
The motor carriage is supplied with safety low voltage via the chain and the track. The use of oil or grease will greatly reduce the conductivity of the chain, track and motor carriage. This may result in faults due to inadequate electrical contact. The chain and track are maintenance-free and must not be oiled or greased.

NOTE
Objects in the movement area of the door may be jammed and damaged. Objects must not be in the range of movement of the door.

2.2 Additional safety information for the radio remote control

Follow the basic safety instructions listed below.

⚠️ WARNING
Danger of crushing and shearing!
The door can be actuated by radio. If the door moves and there are persons or animals in the movement area, crushing and shearing injuries may be caused by the mechanism and safety edges of the door.

► In particular when operating control elements such as the radio remote control, all danger zones must be visible during the entire door operation.

► Always keep the moving door in sight.

► Keep persons and animals clear of the range of movement of the door.

► Never put your hand near the door or near moving parts when the door is moving.

► Do not drive through the door until it has opened completely.

► Store the hand held transmitter that unauthorized persons have no access to it during a dental operation, e.g., by children or animals.

► Never lie and under the opened door.

NOTE
If the door is not in view and the radio remote control is actuated, objects in the movement area of the door may be jammed and damaged. The radio remote control may only be used if you have a clear view of the door.

The user of the radio system is not protected against interference due to other telecommunications equipment or devices. This includes radio-controlled systems that are licensed to operate in the same frequency range. If significant interference occurs, please contact your appropriate telecommunications office which has radio interference measuring equipment or radio location equipment.

You can find the EC Declaration of Conformity for the radio here:

http://som4.me/konform-funk
3. Description of function and product

3.1 The operator and its mode of operation

Fig. Door structure with operator

Sectional doors and other doors can be opened and closed with the electrically powered operator and its accessories. The operator can be controlled, for example, with a handheld transmitter. The door can be opened and closed with the membrane keypad of the wall control unit.

The track is mounted on the ceiling and the lintel above the garage door. The motor carriage is attached to the door by a push arm. The motor carriage moves along the track on a spring-mounted chain and opens or closes the door. The handheld transmitter can be stored in a holder in the garage or in the vehicle.

A plug-in light for the wall control unit is available as an accessory. It is automatically activated during operation. The use of accessories can vary depending on the type.

For more information on using the operator with different doors or accessories, contact your specialist dealer.

3.2 Safety equipment

The operator stops and reverses slightly if it encounters an obstacle. This prevents injury and damage to property. The door will be partially or completely opened, depending on the setting.

In the event of a power failure, the door can be opened from the inside via an emergency release handle or from the outside with a Bowden wire or emergency release lock. For more information, contact your dealer.
3. Description of function and product

3.3 Product designation

Fig. Motor carriage with type plate and device specifications
The type plate includes:
• type designation
• item number
• date of manufacture with month and year
• serial number

In case of questions or service, please supply the type designation, the date of manufacture and the serial number.

3.4 Explanation of tool symbols

Tool symbols
These symbols refer to the use of tools required for installation.

- Phillips screwdriver
- Metal drill 5 mm
- Masonry drill 6/10 mm
- Fork wrench 10/13/17 mm
- Ratchet wrench 10/13/17 mm

Other symbols

- Drilling depth
- Audible engaging or clicking noise
3. Description of function and product

3.5 Scope of delivery

1) Wall control unit
2) Track, pre-assembled with 1 x limit stop, ain and motor carriage
2.1) Isolator, pre-assembled on the chain
2.2) Limit op, included with the track
3) Connecting holes 2 x
4) Track, 2 x
5) Plug-in unit, pre-assembled
5.1) Plug-in unit, pre-assembled, with control cable, 2-wire, approx. 5 m
6) Ceiling holder, 2-part
7) Perforated strip, angled, 2 x
8) Screw M8 x 20 mm, 2 x
9) Hexagonal head bolt M8, 2 x
10) S10 wall plugs 4 x
11) Washer, 4 x
12) Screw 8 x 60 mm, 4 x
13) lintel brake 2 x
14) Hexagonal nut, If-loki ng M10
15) Hexagonal head screw M10 x 100 mm
16) Emergency release handle
17) Push arm, right
18) Safety bolt 10 mm, 2 x
19) Bolt 10 x 34.5 mm, 2 x
20) Door brake
21) Combination screw, 2-wire, approx. 5 m
22) Handheld transmitter, preprogrammed, channel 1 pulse queue, with CR 2032 3 lithium battery
23) Information sticker for garage interior
24) Instruction and Operating Manual

Mounting for the wall control unit:
25) S6 wall plugs 2 x
26) Washer, 2 x
27) Screw Ø 4 x 50 mm, 2 x
28) End caps 2 x

When unpacking, make sure that all items are included in the package. If anything is missing, contact your specialist dealer. The actual scope of delivery may vary depending on the type or customer specifications.

* Accessories not included in the scope of delivery.

** The standard fitting can also be used depending on the installation type. Custom fittings are not included in the scope of delivery.

A number of accessories are available for the operator. Here are a few examples:

- **Sensored**
  - **Pluggable humidity sensor**
  - If humidity is high, the garage door automatically opens a little, providing ventilation.

- **Memo**
  - **Pluggable EEPROM**
  - Memory for expanding the capacity of transmitter commands from 40 internal to 450 external.

- **Lock**
  - **Pluggable locking magnet**
  - For mechanical locking of the motor and therefore improvement of break-in protection.

- **Alarm/Warning buzzer**
  - **Pluggable acoustic signal generator**
  - Option of alarm tone when a break-in attempt occurs or a warning tone, for example in case of a wire door opening.

- **Laser**
  - **Pluggable parking position laser**
  - The parking end position is displayed by a laser point on the dashboard.

- **Battery pack**
  - **Accumulator**
  - Operator is supplied with power during a power failure.

For more information on accessories such as tracks, additional locking magnets, and custom fittings or different transmitters, contact your specialist dealer or see:

[www.sommer.eu](http://www.sommer.eu)
4. Tools and protective equipment

4.1 Required tools and personal protective equipment

Fig. Recommended tools and personal protective equipment for installation
You will require the tools shown above to assemble and install the operator. Lay out the required tools beforehand to ensure fast and safe installation.

⚠️ WARNING
Risk of eye injury!
Chips flying when drilling may cause serious injuries to eyes and hands.
► Wear safety glasses when drilling.

⚠️ WARNING
Risk of injury in the head region!
Impact with suspended objects may cause serious abrasions and cuts.
► You must wear a safety helmet when installing pensioned parts.
5. Declaration of Installation

Declaration of Installation

for the installation of an incomplete machine
in accordance with the Machinery Directive 2006/42/EC, Annex II, Section 1B

SOMMER Antriebs- und Funktechnik GmbH
Hans-Böckler-Straße 21-27
73230 Kirchheim
Germany

hereby declare that the control units
CarTeck DRIVE 500 pro, CarTeck DRIVE 600 pro

have been developed, designed and manufactured in conformity with the:

- Machinery Directive 2006/42/EC
- Low Voltage Directive 2014/35/EU
- Electromagnetic Compatibility Directive 2014/30/EU
- RoHS Directive 2011/65/EU.

The following standards were applied:

- EN ISO 13849-1, PL "C" Cat. 2 Safety of machines - Safety related parts of controls - Part 1: General design guidelines
- EN 60335-1, where applicable Safety of electrical installations / operators for doors
- EN 61000-6-3 Electromagnetic compatibility (EMC) - interference
- EN 61000-6-2 Electromagnetic compatibility (EMC) - interference resistance
- EN 60335-2-95 General safety requirements for household and similar electrical installations - Part 2: Particular requirements for operators for electrically operated garage doors for residential use
- EN 60335-2-103 General safety requirements for household and similar electrical installations - Part 2: Special requirements for operators for gates, doors and windows

The following requirements of Annex 1 of the Machinery Directive 2006/42/EC are met:

1.1.2, 1.1.3, 1.1.5, 1.2.1, 1.2.2, 1.2.3, 1.2.4, 1.2.5, 1.2.6, 1.3.1, 1.3.2, 1.3.4, 1.3.7, 1.5.1, 1.5.4, 1.5.6, 1.5.14, 1.6.1, 1.6.2, 1.6.3, 1.7.1, 1.7.3, 1.7.4

The technical documents have been prepared in accordance with Annex VII Part B and are submitted electronically to the regulators on request.

The incomplete machine is intended for installation in a door system only to form a complete machine as defined by the Machinery Directive 2006/42/EC. The door system may only be put into operation after it has been established that the complete machine complies with the regulations of the above EC Directive.

The undersigned is responsible for compilation of the technical documents.

Kirchheim, 01-12-2017
Johann Lude
Responsible for documents
6. Installation

6.1 Important information on installation

Please observe and comply with all instructions to ensure safe installation.
Persons under the influence of drugs, alcohol, or medications that affect their ability to react may not work on the operator.
The installation of the operator may only be performed by a qualified specialist. This installation and Operating Manual must be read, understood and complied with by a qualified specialist who installs the operator.

⚠️ DANGER
Danger if not observed!
If safety instructions are not observed, serious injury or death may result.
► All safety instructions must be complied with.

⚠️ WARNING
Danger of falling!
Unsafe or defective ladders may tip and cause serious or fatal accidents.
► Use only a non-slip, stable ladder.
► Ensure that ladders are safely positioned.

⚠️ WARNING
Danger for trapped persons!
Persons may be trapped inside the garage. If trapped persons cannot free themselves, severe injury or death may result.
► Test the operation of the emergency release regularly from inside and if necessary, from outside.
► If there is no second entrance to the garage, you must have a release lock or a Bowden wire for unlocking from the outside installed. This can be used to free persons who cannot free themselves.

⚠️ WARNING
Danger due to projecting parts!
Door leaves or other parts must not project into roads or public footpaths. This also applies while the door is moving.
This may cause serious injury or death to persons or animals.
► Keep public roads and footpaths clear of projecting parts.

⚠️ WARNING
Danger due to falling parts of doors!
If a door is incorrectly weight-balanced, springs may break suddenly. Falling door parts may cause serious injury or death.
Check:
► the ability of the door.
► that the door does not bend, rotate or twist when opened or closed.
► that the door runs smoothly in the tracks.

⚠️ WARNING
Danger due to falling ceiling and wall parts!
The operator cannot be installed correctly if ceiling and walls are unstable or if unsuitable mounting materials are used. Persons or animals may be struck by falling parts of the wall, ceiling or operator. Severe injuries or death may result.
► You must test the ability of the ceiling and the walls.
► Use only permitted mounting materials appropriate for the supporting surface.
6. Installation

**WARNING**
Danger of entrapment!
Loose clothing or long hair may be trapped by moving parts of the door. Severe injuries or death may result.
► Keep clear of the moving door.
► Always wear tight-fitting clothing.
► Wear a hairnet if you have long hair.

**WARNING**
Danger of crushing and shearing!
If the door moves and there are persons or animals in the movement area, crushing and shearing injuries may be caused by the mechanism and safety edges of the door.
► Only use the operator when you have a direct view of the door.
► All danger zones must be visible during the entire door operation.
► Always keep the moving door in sight.
► Keep persons and animals away from the door in the range of movement of the door.
► Never put your hand near the door or near moving parts when the door is moving. In particular, do not reach into the movement of the arm.
► Do not reach into the ceiling suspension unit when the motor carriage is running along the track.
► Do not drive through the door until it has opened completely.
► Never stand under the opened door.

**WARNING**
Danger of tripping and falling!
Unsafely positioned parts such as packaging, operator parts or tools may cause trips or falls.
► Keep the installation area free of unnecessary items.
► Place all parts where no-one is likely to trip or fall near them.
► The general workplace guidelines must be observed.

**WARNING**
Risk of eye injury!
Chips flying when drilling may cause serious injuries to eyes and hands.
► Wear safety glasses when drilling.

**CAUTION**
Risk of injury to hands!
Rough metal parts may cause abrasions and cuts when picked up or touched.
► Wear safety gloves when deburring or performing similar work.

**NOTE**
If the ceiling and walls are not stable, parts of the ceiling, walls or the operator may fall. Objects may be damaged. Ceiling and walls must be stable.

**NOTE**
To prevent damage to the door or operator, use only approved mounting materials such as wall plugs or screws. The mounting material must be suitable for the material of the ceiling and walls. This applies particularly for prefabricated garages.

**INFORMATION**
Ask your specialist dealer if you require additional installation accessories for different installation or attachment situations.
6. Installation

6.2 Preparation for installation

Before installation, you must check whether the operator is suitable for the door. See also Chapter "3.7 Technical data".

Removal of actuation parts

**WARNING**

Danger of entrapment!

Persons or animals may be trapped by straps or cords and pulled into the movement zone of the door. Severe injuries or death may result.

► Remove straps and cords used for mechanical actuation of the door.

Before installation remove:

• manual locking on door
• all cords or straps necessary to operate the door by hand.

Disabling mechanical locks

**NOTE**

If locks or other locking systems are installed on a mechanical door, they may block the operator. This may cause faults or damage to the operator. Before the installation of the operator, all mechanical locking systems must be disabled.

The mechanical lock on a door with an operator must be removed or disabled if it is not compatible with the operator.

Checking the mechanism and weight balance

**WARNING**

Danger due to falling parts of doors or complete door panels!

Wires, spring sets and other fittings can suddenly break. The complete door panel can fail. Persons or animals may be struck by falling parts of the door or the complete door panel. Severe injuries or death may result.

Before installation, qualified personnel must the following and adapt if necessary:

► wires, spring sets and other fittings of the door.
► the weight compensation of the door.

**WARNING**

Danger of entrapment!

If the force setting is too high, persons or animals in the movement area of the door may be trapped and pulled along with the door. Severe injuries or death may result.

► The force setting is relevant to safety and must be carried out by a qualified specialist.
► You must proceed with extreme caution if you check and if necessary adjust the force setting.

**NOTE**

If the weight compensation of the door is incorrectly adjusted, the operator may be damaged.

• The door must be stable.
• It must not bend, rotate or twist when opening and closing.
• The door must move easily in its tracks.
6. Installation

1. Check the mechanism of the door, such as cables, spring sets and other fittings.

Fig. 2

2. Open the door halfway.
   ⇒ The door must remain in this position.
   ⇒ The door must be moved easily by hand and must be balanced.

If the door moves upwards or downwards by itself, the weight balance of the door must be adjusted.

Emergency release
In a garage without a separate entrance (e.g. wicket doors), the operator's emergency release must be operable from outside. The emergency release must also be accessible from the outside. This can be done with a Bowden wire or a release lock.

Ask your specialist dealer.

Adjusting the top roll of a sectional door

Fig. Top roll on sectional door
If a manually operated sectional door is retrofitted with an operator, the position of the top roll must be checked and adjusted if necessary. The top roll must be routed over the roller.

6.3 Installing the operator system
The operator may only be installed if the installation requirements and dimensions below are correct.

**NOTE**
Specify the position for mounting the operator on the door. Manually open and close the door several times. The door must be moved easily. A manual movement force of 150 N is applicable for private garage doors and 260 N for commercial doors. The value is applicable for the entire life of the door. The door must also be maintained and inspected as specified by the door manufacturer.

Selecting the installation variant
The scope of delivery offers the option of implementing the following installation variants. Check your specific situation and select the optimum installation variant for you.

Installation situation A, B and C

Fig. Installation situation and installation variants A, B and C
6. Installation

Installation variant A
This variant is selected if there is a separate entrance to the garage. The wall control unit is installed near a power outlet. The integrated membrane keypad of the wall control unit can be used to open the door when entering the garage or to close the door when leaving the garage. The control cable is led out at the rear end of the track, see Chapter "6.5 Installing the operator system for installation variants A and B."

Installation variant B
This variant is selected when an existing device is being replaced by a new one and there is already a power outlet or other control lines such as buttons or photo cells in this area. Here, the wall control unit is mounted on the ceiling in the rear area of the track. The control cable of the plug-in unit is also led out at the rear end of the track, see chapter "6.5 Installing the operator system for installation variants A and B."

Installation variant C
This variant is selected when there is a power outlet which can be used for the wall control unit located near the door opening. Here, the control cable is led out at the front end of the track, see chapter "6.6 Installing the operator system for installation variant C."

6.4 Installation on the door

INFORMATION
Because the track of the operator and the rear distance track are on the same level, the distance track must be severed and displaced.

Version 1

C = 120 - 160
6. Installation

6.5 Installing the operator system for installation variants A and B

Fig. 1

CAUTION
Risk of injury to hands!
Rough metal parts may cause abrasions and cuts when picked up or touched.
► You must wear safety gloves when working with rough metal parts.

1. Open the package.
   Place the two cartons in the package beside the tracks and open them.
   Check the entire contents against the scope of delivery, see chapter "3.5 Scope of delivery."

2. Remove the two connecting sleeves beside the motor carriage and attach to the track on the left and right.

Fig. 2
6. Installation

3. Attach a track to each of the connecting sleeves.

4. Plug the **plug-in unit with control cable** into the track behind the limit stop. Lay the chain over the limit stop.

5. Rotate the chain 90° and insert it into the chain holder of the **plug-in unit with control cable**. Rotate the chain back 90°. ⇒ The entire chain is attached.

6. Plug the **plug-in unit without control cable** on the opposite side of the track.

7. Rotate the chain 90° and insert it into the chain holder of the **plug-in unit without control cable**. Rotate the chain back 90°. ⇒ The entire chain is attached.

**NOTE**
The chain must be parallel to the track to prevent damage to the operator.

**NOTE**
The plug-in unit with control cable must not be tensioned.
6. Installation

6.6 Installing the operator system for installation variant C

1. Open the package.
   Place the two cartons in the package beside the tracks and open them.
   Check the entire contents against the scope of delivery listed in this Installation and Operating Manual, see chapter “3.5 Scope of delivery.”

2. Remove the two connecting sleeves beside the motor carriage and attach to the track on the left and right.

---

8. Tens on the chain to the mark on the plug-in unit without control cable, see arrow in the detailed view.

9. Fasten the two header brackets to the plug-in unit without control cable with screw and nut.

10. Turn the track to install all the ceiling brackets.
    The distance between the rear plug-in unit with control cable and the ceiling holder should be 100 - 700 mm.
    Place the ceiling holder on the track and slide into one another.

11. Fasten the perforated strips to the ceiling holder on the left and right. Also observe the distances for installation to the ceiling or lintel.
    ⇒ The track is prepared for the remainder of the installation.

For further installation, see Chapter “6.7 Installation on the door.”

---

Fig. 8

Fig. 9

Fig. 10

Fig. 11

Fig. 1

CAUTION
Risk of injury to hands!
Rough metal parts may cause abrasions and cuts when picked up or touched.
► You must wear safety gloves when working with rough metal parts.
6. Installation

3. Attach a track to each of the connecting sleeves.

4. Plug the plug-in unit with control cable into the track behind the limit stop.

5. Rotate the chain 90° and insert it into the chain holder of the plug-in unit with control cable. Rotate the chain back 90°.

6. Plug the plug-in unit without control cable on the opposite side of the track. Lay the end of the chain over the limit stop.

7. Rotate the chain 90° and insert it into the chain holder of the plug-in unit with control cable. Rotate the chain back 90°.

⇒ The entire chain is attached.

NOTE
The chain must be parallel to the track to prevent damage to the operator.

NOTE
The plug-in unit with control cable must not be tensioned.
8. Tension the chain to the mark on the plug-in unit without control cable, see arrow in the detailed view.

9. Fasten the two header brackets to the plug-in unit with control cable with screw and nut.

10. Turn the track to install all the ceiling bracket. The distance between the rear plug-in unit without control cable and the ceiling holder should be 100 - 700 mm. Place the ceiling holder on the track and slide into one another.

11. Fasten the perforated strips to the ceiling holder on the left and right. Also observe the distances for installation to the ceiling or lintel.

⇒ The track is prepared for the remainder of the installation.

For further installation, see chapter "6.7 Installation on the door."
6. Installation

6.7 Installation on the door

As installation on the door is similar for variants A, B and C, installation on the door is only described for variants A and B.

![Fig. 1.1 Highest running point for one piece and up-and-over doors](image)

![Fig. 1.2 Highest running point for a sectional door](image)

**INFORMATION**

If the distance between the ceiling and the bottom edge of the track is greater than 245 mm, extend the ceiling holders with additional perforated strips.

1. Measure the highest running point of the door "X" depending on the door type:
   - Open the door and measure the distance (min. 35 mm) between the top edge of the door and the ceiling.
   - The distance between "X" and the bottom edge of the track must be at least 5 mm and no more than 65 mm.

2. The push arm must be at a max. angle of 30° with the door closed.

3. Close the door.
   - Select the lintel or ceiling for installation.
   - Measure the Centre of the door at the front and mark the position on the door and the lintel or ceiling.

4. Mark points 70 mm to the right and left of the Centre of the door at the same height on the lintel or ceiling.

![Fig. 2](image)

**INFORMATION**

The distance may be reduced if a door handle is attached to the middle of the door. The door must be able to run freely.

![Fig. 3](image)

![Fig. 4](image)

![Fig. 5](image)

![Fig. 6](image)

www.garagedoorsonline.co.uk

01926 463888
6. **Installation**

32

**NOTE**
Cover the operator during drilling to prevent dirt from entering the operator unit and damaging it.

**INFORMATION**
If installing on the ceiling, space the drill holes 15 mm apart if possible. This reduces the tilting angle of the mounting bracket.

**INFORMATION**
The drilling depth must be considered with respect to the ceiling and wall thickness, particularly with prefabricated garages. It may be necessary to reduce the hole depth. Only use permissible mounting materials appropriate for the supporting surface.

5. Drill two holes (Ø 10 x 65 mm deep) in the ceiling or lintel.

6. Open the door.
Transfer the mark from the centre of the door to the ceiling at the rear.

7. Close the door.
Insert the wall plug into the lintel or ceiling.
Lift the track at the front.
Screw the lintel fitting at the front to the lintel or ceiling with two screws and washers. Tighten the screws.
⇒ The track is attached to the lintel or ceiling.

**NOTE**
The operator must always be installed parallel to the tracks of the door to prevent damage to the operator and the tracks.

8. Align the operator parallel to the tracks of the door.

9. Align the track parallel to the centre of the door at the rear. Align the ceiling bracket with a spirit level if necessary.

10. Mark the holes for the ceiling holder on the ceiling.
Drill two holes (Ø 10 x 65 mm deep).
Insert the wall plugs
Insert two screws with washers and screw to the ceiling with the perforated strips. Tighten the screws.
⇒ The track is attached to the ceiling.
6. Installation

**CAUTION**

Risk of injury to hands!

Rough, projecting metal parts may cause abrasions and cuts when picked up or touched.

- The projecting perforated strips must be sawn off and deburred to prevent injury.
- Wear safety gloves when deburring.

11. The projecting perforated strips must be shortened.

**WARNING**

Danger of entrapment!

Persons or animals in the movement area of the door may be trapped in a loop of the emergency release cord and the door may be accidentally unlocked. Severe injuries or death may result.

- The emergency release handle which is included must be used.

**NOTE**

The emergency release handle may cause damage, e.g. scratches on the vehicle. The distance between the garage floor and the emergency release cord must be less than 1.8 m. The emergency release handle must be at least 50 mm from moving and fixed parts throughout its complete travel path.

12. Attach the emergency release handle:

Pull the cord through the emergency release handle. Tie a double knot in the cord at an appropriate point. Pull the emergency release handle over the double knot. If necessary, shorten or lengthen it with suitable materials.

13. Pull the emergency cord once to unlock the motor carriage.

Slide the motor carriage forward to the door.

**WARNING**

Risk of injury in the head region!

Impact with suspended objects may cause serious abrasions and cuts.

- You must wear a safety helmet when installing a pointed part.
6. Installation

14. Plug the push arm into the door bracket. Insert the bolt and slide on the safety bolt.
Plug the push arm into the motor carriage at the front. Insert the bolt and slide on the safety bolt.

15. Align the door bracket with the center of the door. Mark the position of the holes and drill them (Ø 5 mm). Fix the door bracket to the door with the hexagon bolts.
⇒ The push arm is attached to the motor carriage and the door.

16. Open the door completely by hand.
If the door rubs against the operator or the tracks, the operator must be offset.
⇒ The limit stop moves automatically with the motor carriage.

**NOTE**
The door must not rub against the operator or tracks. This could damage the operator or tracks. The operator must be offset.

**INFORMATION**
The limit stop can be subsequently pushed under the chain and screwed into the track. Then screw the limit stop tightly to the track at the respective spot.

17. Tighten the screw on the limit stop with a Phillips screwdriver without changing its position.
Check the door OPEN end position:
Open the door fully for this. The motor carriage moves towards the door OPEN position on the limit stop until a "click" noise is heard.
⇒ The door OPEN end position is set.

**NOTE**
In the case of an emergency release, the door could independently open or close itself due to a broken spring or incorrect setting of the weight balancing. The operator could be damaged or destroyed. Check the emergency release regularly.

**INFORMATION**
It can be locked and released in any door position.

**NOTE**
Do not push the door all the way to the mechanical stop. This is because otherwise, the operator will pull the door against the mechanical stop. This will apply tension to the door and it may be damaged. A clearance of about 30 mm is required.
6. Installation

18. Move door to centre position.
⇒ The motor carriage moves with it.

19. Pull the emergency release cord.
⇒ The motor carriage is locked.
⇒ The door can only be moved by the operator.

20. Check to make sure that no part of the door projects into public footpaths or roads.

⇒ Installation of the operator is complete.

6.8 Installing the wall control unit

In particular, follow the basic safety instructions listed below.

⚠️ DANGER
Danger due to electric current!
Contact with live parts may result in electric current flowing through the body. Electric shock, burns or death will result.

► All work on electrical components must be carried out by a trained electrician.
► Before inserting the mains power plug for the first time, ensure that the voltage of the power supply listed on the operator plate matches the voltage of the power source.
► Do not connect the power supply until installation is complete.
► Disconnect the mains plug before working on the operator.
► If an accumulator is connected, disconnect it from the control unit.
► Check that the operator is not live.
► Secure the operator against being switched back on.

⚠️ WARNING
Danger of crushing and shearing!
The door can be actuated via the wall switch. If the door moves and there are persons or animals in the movement area, crushing and shearing injuries may be caused by the mechanism and safety edges of the door.

► The wall control unit with keypad must be mounted within sight of the door.
► The wall control unit must not be installed in the vicinity of moving parts.
► The membrane keypad of the wall control unit must be installed at a height of at least 1.6 m.

NOTE
To prevent damage to the operator, do not connect the wall control unit to the power supply until installation is complete.

INFORMATION
The power cable is approx. 1.2 m long.
6. Installation

INFORMATION
The power cord that has been provided must not be shortened or extended. All devices to be connected externally must have safe isolation of the contacts from the mains voltage supply in accordance with IEC 60364-4-41. Wiring for external devices must be installed in accordance with IEC 60364-4-41. All electrical wiring, including the control cable, must be firmly secured to prevent displacement.

Fig. 1

INFORMATION
The drilling depth must be considered with respect to the ceiling and wall thickness, particularly with prefabricated garages. It may be necessary to reduce the hole depth. Only use permissible mounting materials appropriate for the supporting surface.

1. Choose a suitable location for the wall control unit close to an existing power outlet. The maximum length of the control cable is 5 m, and it must not be extended. Note that the distance between the wall control unit and the power outlet must be at least 1.1 m. The membrane keypad of the wall control unit must be installed at a height of at least 1.6 m.

Fig. 2

Fig. 3

NOTE
The control unit cover is connected to the circuit board of the wall control unit via a connection cable. If an accumulator has been installed, it is also connected to the circuit board. Carefully remove the control unit cover and unplug the connections. This prevents damage to the wall control unit.

2. Loosen the screws on the wall unit of the light cover and remove the light cover upwards. Hold the front firmly while doing so.

3. Remove the control unit gently towards the front and unplug the connection cable for the membrane keypad from the wall control unit.

Fig. 4: Installation example

WARNING
Risk of eye injury! Chips flying when drilling may cause serious injuries to eyes and hands. Wear safety glasses when drilling.
6. Installation

4. Transfer the mounting points to the substructure. Drill two holes (Ø 6 x 40 mm deep). Insert the two wall plugs. Affix the wall control unit with two screws and two washers. Align the unit and firmly tighten the screws. Press the end caps into the indentation to seal the housing.

5. Route the control cable of the plug-in unit up to the wall control unit and secure to prevent displacement.

6. Lay the control cable along the cable conduit on the rear side of the wall control unit up to the cable inlet. Feed the control cable into the wall control unit through the cable inlet.

7. Shorten the control cable to no less than 140 mm in length, uncover the last 50 mm and strip the wires.

8. Route the control cable in the wall control unit along the transformer up to the gr/rd terminal. Secure the control cable with the upper strain relief to prevent displacement.

9. Connect the green wire of the control cable to the gn terminal. Connect the red wire of the control cable to the rd terminal.

10. Close the housing in reverse order. ⇒ Installation of the wall control unit is complete. Other connection options such as buttons or warning light are described in chapter "11. Connections and special functions of the wall control unit."
7. Removing and fastening covers

7.1 Cover of the motor carriage

Observe in particular the following safety instructions for this chapter.

⚠️ WARNING

Danger due to optical radiation!
Looking into an LED at short range for an extended period may cause optical glare. This may temporarily reduce vision. This may cause serious or fatal accidents.
► Never look directly into an LED.

⚠️ WARNING

Danger due to hot surfaces!
After frequent operation, parts of the motor carriage or the control unit may become hot. If the cover is removed and hot parts are touched, they may cause burns.
► Allow the operator to cool down before removing the cover.

Removing the cover

1. Press on the cover lock at the back of the motor carriage and remove the cover.

7.2 Installing the cover

Fig. 1

1. Insert the cover from the front and lock it to the motor carriage at the back.
7. Removing and fastening covers

7.3 Light and control unit cover of the wall control unit

⚠️ **DANGER**

Danger due to electric current!
Contact with live parts may result in electric current flowing through the body. Electric shock, burns or death will result.

- All work on electrical components must be carried out by a trained electrician.
- Disconnect the mains plug before working on the operator.
- If an accumulator is connected, disconnect it from the control unit.
- Check that the operator is not live.
- Secure the operator against being switched back on.

**WARNING**

Danger due to hot surfaces!
After frequent operation, parts of the motor carriage or the control unit may become hot. If the cover is removed and hot parts are touched, they may cause burns.

- Allow the operator to cool down before removing the cover.

Removing the light and control unit cover

1. Disconnect the operator from the mains.
   Check that the operator is not live from the power supply.

2. Unplug the light and control unit cover from the wall control unit and remove it upwards. Hold the front firmly while doing so.

**NOTE**

The control unit cover is connected to the circuit board of the wall control unit via a connection cable. If an accumulator has been installed, it is also connected to the circuit board. Carefully remove the control unit cover and disconnect the connections to prevent damage to the wall control unit.

3. Remove the control unit gently towards the front and unplug the connection cable for the membrane keypad from the wall control unit.

4. If an accumulator is used, it must also be disconnected, see Chapter "11.12 Installing and removing the accumulator."

5. Remove the control unit.

**Attaching the light and control unit cover**

1. After working on the wall control unit, replace the control unit in reverse order.

2. Connect the operator to the mains. Check that the power supply is connected.
   ⇒ The operator is supplied with mains voltage.
8. Electrical connection

8.1 Connection to a power outlet

A power outlet is required for the electrical connection of the operator. A power outlet must be installed by a trained electrician. The power outlet must be protected by a fuse. Local and national installation regulations (e.g., VDE) must be observed. Persons under the influence of drugs, alcohol, or medications that can influence their ability to react may not work on the operator. Observe in particular the following safety instructions for this chapter.

**DANGER**

Danger due to electric current! Contact with live parts may result in electric current flowing through the body. Electric shock, burns or death will result.

► All work on electrical components must be carried out by a trained electrician.
► Before inserting the mains power plug for the first time, ensure that the voltage of the power source matches the voltage listed on the operator type plate.
► Do not connect the power supply until installation is complete.
► Disconnect the mains plug before working on the operator.
► If an accumulator is connected, disconnect it from the control unit.
► Check that the operator is not live.
► Secure the operator against being switched on.

**NOTE**

To prevent damage to the operator, do not connect the wall control unit to the power supply until installation is complete.
9. Initial operation

9.1 Safety information for initial operation

Observe in particular the following safety instructions for this chapter.

**WARNING**

**Danger of entrapment!**

Persons and animals in the movement area of the door may be trapped and pulled along with the door. Severe injuries or death may result.

► Keep clear of the moving door.
► Always wear tight-fitting clothing.
► Wear a hairnet if you have long hair.

**WARNING**

**Danger of crushing and shearing!**

If the door moves and there are persons or animals in the movement area, crushing and shearing injuries may be caused by the mechanism and safety edges of the door.

► Only use the operator when you have a direct view of the door.
► All danger zones must be visible during the entire door operation.
► Always keep the moving door in sight.
► Keep persons and animals clear of the range of movement of the door.
► Never put your hand near the door or near moving parts when the door is moving. In particular, do not reach into the moving push arm.
► Do not reach into the ceiling suspension unit when the motor carriage is running along the track.
► Do not drive through the door until it has opened completely.
► Never stand under the opened door.

**NOTE**

Objects in the movement area of the door may be jammed and damaged. Objects must not be in the range of movement of the door.

**INFORMATION**

The control unit detects a short-circuit between chain and track and then switches the operator off. If the short circuit is no longer present, the operator runs normally again.

**INFORMATION**

If a photocell is used, it must not be actuated when starting the programming. If a photocell is used as a frame photocell, move the door to the centre position.
9. Initial operation

9.2 Initial operation

Before initial operation, read this chapter with special care to ensure that you make the adjustments to the operator safely and optimally.

⚠️ **WARNING**

Danger of entrapment!

If the force setting is too high, persons or animals in the movement area of the door may be trapped and pulled along with the door. Severe injuries or death may result.

➤ The force setting is relevant to safety and must be carried out by a qualified specialist.

➤ You must proceed with extreme caution if you check and if necessary adjust the force setting.

➤ Please note that the operator may only be operated if a non-hazardous force value has been set.

➤ Select the force setting low enough to eliminate any danger of injury by the closing force.

---

**NOTE**

Do not use a metal object to set the DIP switches, because this may damage the DIP switches or the circuit board. Use a suitable tool, for example a flat plastic object, to set the DIP switches.

**INFORMATION**

The force setting must be checked after installation of the operator, see also chapter "13.1 Testing obstacle detection."

---

<td><img src="image" alt="DIP switch 4" /></td>
</tr>
</tbody>
</table>

For compliance with EN 13241-1, before initial operation, the door type must be left and set on the motor carriage with the DIP switch "OFF". The factory setting of the DIP switch on the motor carriage is "OFF", which is then applicable for the final doors.

The motor carriage has an automatic force setting. The motor carriage remembers the required force during the door OPEN and CLOSE movements and stores it when the end position has been reached.

**INFORMATION**

During initial operation:

- Stay in the garage, particularly when programming.
- Obstacle detection is not operated to the door, and the operator is in the programming phase.

**INFORMATION**

Programming can be carried out via a handheld transmitter, the membrane keypad or an external button.
9. Initial operation

INFORMATION
The operating forces can be modified and adjusted with SOMlink and a WiFi-enabled device.

Fig. 1
1. Compare the existing power supply with the type plate.
   Connect the operator with the mains voltage.
   ⇒ The status LED of the motor carriage flashes green.

Fig. 2
2. After the operator has been connected to the power supply, its first movement after a pulse is always door OPEN.
   Briefly press button 1 on the preprogrammed handheld transmitter. See also the separate instructions for the "Handheld transmitter."
   ⇒ The motor carriage moves slowly to the door OPEN end position and automatically switches off at the limit stop.
   ⇒ The operator lighting flashes.

Fig. 3
3. Press button 1 on the handheld transmitter again briefly.
   ⇒ The motor carriage moves slowly in the door CLOSE direction. The LEDs of the operator lighting flash.
   The motor carriage switches off automatically when it reaches the factory-set closing force at the door CLOSE end position.
   ⇒ The operator lighting flashes in a different sequence.

Fig. 4
4. Press button 1 on the handheld transmitter briefly (< 1 second) to end the programming process:
   ⇒ The operator lighting flashes briefly in a fast sequence.
   The operator automatically starts its programming process:
   ⇒ The motor carriage moves automatically to the door OPEN end position again and programs the required operating force.
   ⇒ The motor carriage moves automatically to the door CLOSE end position.
   If necessary, the motor carriage opens for the path times for programming with a greater door weight.
   ⇒ The motor carriage moves automatically in the door OPEN direction to program the lift run.
   ⇒ The door automatically returns to the door CLOSE end position.
   ⇒ The motor carriage moves automatically to the door OPEN end position.
9. Initial operation

⇒ The LEDs of the operator lighting remain steady.
⇒ Operator is programmed and ready for use.

INFORMATION
The motor carriage stops if the door is difficult to move. The door mechanism must be checked, see Chapter "9.3 Detecting obstacles during the force programming run."

It may be necessary to adjust the end positions.
See Chapter "9.4 Mechanical adjustment of the end positions."

9.3 Detecting obstacles during the force programming run

If the door detects an obstacle during the OPEN and CLOSE door movements and the force programming run a n not be completed, the door stops.

NOTE
Check the travel path, mechanism, spring tension and the weight balance to prevent damage to the door system.

1. Press and hold button 1 on the handheld transmitter.
⇒ The motor carriage moves briefly and then moves continuously in the door CLOSE direction until the desired end position has been reached.
2. Release button 1 on the handheld transmitter.
3. Fine adjustment:
   Press and hold button 1 on the handheld transmitter until the motor carriage moves briefly.
   Release button 1 on the handheld transmitter.
4. The process may be repeated until the desired end position is reached.
   Press button 1 on the handheld transmitter briefly (< 1 second) to the door CLOSE end position.
⇒ The motor carriage starts the automatic force programming run to the door OPEN end position.
⇒ The door starts the automatic door CLOSE force programming run.

If an obstacle is detected again, the motor carriage stops and the process is repeated.

1. Press and hold button 1 on the handheld transmitter.
⇒ The motor carriage starts without jerking, because the end position of the door is already reached.
⇒ The motor carriage moves to the end position.
2. Release button 1 on the handheld transmitter.
9. Initial operation

9.4 Mechanical adjustment of the end positions

Increasing the closing pressure of the end position for door CLOSE

1. Loosen the screw on the limit stop and move the limit stop a few millimetres towards door CLOSE. Re-tighten the screw.

2. The function of the emergency release must be checked in the door CLOSE end position. Unlocking must be possible.

Reducing the closing pressure of the end position for door CLOSE

1. Loosen the screw on the limit stop and move the limit stop a few millimetres towards door OPEN. Re-tighten the screw.

NOTE
Do not push the door all the way to the mechanical stop. This is because otherwise, the operator will pull the door against the mechanical stop. This will apply tension to the door and it may be damaged. A clearance of 30 mm is required.

9.5 Attaching information sign and warning signs

Fig. 1.1 Attach the information sign near the stationary control or control unit.

Fig. 1.2 Attach the warning signs on door panel.

⇒ Initial operation is complete.

  - Power supply for optional accessories, option of finger scanner or external lighting

For more information on the accessories, contact your specialist dealer or see:

- [www.sommer.eu](http://www.sommer.eu)

Observe in particular the following safety instructions for this chapter.

---

**DANGER**

**Danger due to electric current!**

Contact with live parts may result in electric current flowing through the body. Electric shock, burns or death will result.

- ► All work on electrical components must be carried out by a trained electrician.
- ► Do not connect accessories unless the operator is disconnected from the power supply.
- ► Disconnect the mains plug before working on the operator.
- ► If an accumulator is detached, disconnect it from the control unit.
- ► Check that the operator is not live.
- ► Secure the operator against being switched back on.

---

10. Connections and special functions of the motor carriage

10.3 Reducing the illumination power of LEDs

**WARNING**

Danger due to optical radiation!

Looking into an LED at short range for an extended period may cause optical glare. This may temporarily reduce vision. This may cause serious or fatal accidents.

► Never look directly into an LED.

The illumination power of the LEDs of the operator lighting can be reduced during adjustment work on the motor carriage.

1. Press the Radio or Reset button once briefly.
   ⇒ Illumination power of LEDs reduced.

10.4 Explanation of the radio channels

<table>
<thead>
<tr>
<th>LED</th>
<th>Radio channel</th>
<th>Setting/function</th>

<td>CH 4</td>
<td>Defined CLOSE</td>
</tr>
</tbody>
</table>

10.5 Programming the transmitter

1. Press the Radio button repeatedly to select the required channel.

2. Press the desired button on the transmitter until the previously selected LED (CH 1, CH 2, CH 3, CH 4) goes out.
   ⇒ LED goes out - programming is complete.
   ⇒ The transmitter has transferred the radio command to the radio receiver.

3. Repeat the above steps to program additional transmitters.

**INFORMATION**

Further transmitters cannot be programmed if all memory locations of the receiver are occupied.

If the memory capacity has been reached

A total of 40 handheld transmitters are available for all channels. If an attempt is made to program additional transmitters, the red LEDs of radio channels CH 1 - CH 4 flash. If more memory positions are needed, see Chapter "10.6 Information on Memo."

10.6 Information on Memo

The use of the Memo depends on the motor carriage circuit board.

The memory part of the Memo is ended to 450 handheld transmitters using the optional Memo accessory part. When the Memo is plugged in, all available transmitter are transferred from the internal memory to the Memo and stored there. The Memo must remain plugged in on the control unit.

No more transmitters are stored in the internal memory. Stored transmitters are not transferred from the Memo back to the internal memory.

All radio channels including the memory of the Memo are deleted, see Chapter "10.11 Deleting all radio channels in the receiver."

**INFORMATION**

Delete the Memo on a new operator. Otherwise, all stored transmitters of an operator are deleted and must be reprogrammed.
10. Connections and special functions of the motor carriage

10.7 Cancelling programming mode
1. Press the Radio button until all LEDs are off or make no input for 30 seconds
⇒ Programming mode is cancelled.

10.8 Deleting a transmitter button from the radio channel
1. Press the Radio button repeatedly to select the required radio channel.
2. Press and hold the Radio button for 15 seconds.

<table>
<thead>
<tr>
<th>LED</th>
<th>1 x</th>
<th>2 x</th>
<th>3 x</th>

</tbody>
</table>

⇒ The LED blinks after 15 seconds
2. Release the Radio button.
⇒ The radio is now in deletion mode.
3. Press the transmitter button for which the radio channel is to be deleted in the radio channel.
⇒ LED goes out.
⇒ The deletion progress is ended.
Repeat the process for additional buttons as required.

10.9 Deleting transmitter completely from the receiver
1. Press and hold the Radio button for 20 seconds
⇒ The LED blinks after 15 seconds
⇒ After another 5 seconds, the flash sequence changes to flashing.

2. Release the Radio button.
⇒ The radio is now in deletion mode.
3. Press any button on the transmitter that is being deleted.
⇒ LED goes out.
⇒ The deletion process is completed.
⇒ The transmitter is deleted from the radio.
Repeat the process for additional transmitters as required.

10.10 Deleting radio channel in the receiver
1. Press the Radio button repeatedly to select the required radio channel.
2. Press and hold the Radio button for 25 seconds.

<table>
<thead>
<tr>
<th>LED</th>

</tr>
</tbody>
</table>

⇒ The LED blinks after 15 seconds
⇒ After another 5 seconds, the flash sequence changes to flashing.
⇒ After another 5 seconds the LED of the selected radio channel remains steady.

2. Release the Radio button.
⇒ The deletion process is ended.
⇒ All programmed transmitters on the selected radio channel are deleted from the radio.

10.11 Deleting all radio channels in the receiver
1. Press and hold the Radio button for 30 seconds
⇒ The LED blinks after 15 seconds
⇒ After another 5 seconds, the flash sequence changes to flashing.
⇒ After another 5 seconds the LED of the selected radio channel remains steady.
⇒ After another 5 seconds all LEDs light up.

2. Release the Radio button.
⇒ All LEDs are off after 5 seconds.
⇒ All programmed transmitters are deleted from the radio.
⇒ The radio is completely deleted; this also applies if the Memo is plugged in.
10. Connections and special functions of the motor carriage

10.12 Programming a second handheld transmitter by radio (HFL)

Prerequisites for programming by radio
A handheld transmitter must already be programmed on the radio receiver. The handheld transmitters used must be identical. For example, a Pearl can only be programmed on a Pearl and a Pearl Vibe on a Pearl Vibe. The button assignment of handheld transmitter (A) that puts the radio receiver into programming mode by radio is used for the new handheld transmitter (B) that is to be programmed. The already-programmed handheld transmitter and the new handheld transmitter to be programmed must be situated in the range of the radio receiver.

Example:
1. Button 1 has been programmed to radio channel 1 and button 2 to radio channel 2 by handheld transmitter (A).
⇒ The newly programmed transmitter (B) adopts the button assignment of transmitter (A): Button 1 to radio channel 1 and button 2 to channel 2.

Restriction
The following setting is not possible:
• Targeted programming of a selected handheld transmitter button to a radio channel

⇒ The LEDs of the operator lighting remain steady.
⇒ Second handheld transmitter (B) has been programmed.

10.13 Performing a reset

<table>
<thead>
<tr>
<th>1 s</th>
<th>5 s</th>
<th>10 s</th>
<th>15 s</th>

</thead>
<tbody>
<tr>
<td>Reset of the safety inputs</td>
<td>Force values deleted</td>
<td>Position values and frame photo eye deleted</td>
<td>Settings restored</td>
</tr>
</tbody>
</table>

Fig. 1

INFORMATION
A SOMlink and a WiFi-enabled device are required to reset all parameters to the factory settings.

Resetting the safety devices
1. Press the green reset button for 1 second.
⇒ Reset of the connected safety devices.
⇒ Subsequently attached safety devices are detected.

Deleting the force values
1. Press the green reset button on the motor carriage for 5 seconds until the green status LED flashes slowly.
⇒ Force values are deleted.

Deleting force and position values
1. Press the green reset button on the motor carriage for 10 seconds until the green status LED flashes quickly.
⇒ Force and position values deleted.
⇒ Frame photo eye deleted.
10. Connections and special functions of the motor carriage

Resetting
1. Press the green Reset button on the motor carriage for 15 seconds until the green status LED goes out.
⇒ Reset is performed.

10.14 Setting the DIP switches on the motor carriage

Special functions can be set with the DIP switches on the motor carriage.

For compliance with EN 13241-1, before initial operation, the door type must be selected and set on the motor carriage with the DIP switches. The factory setting of the DIP switches is OFF, which is then applicable for sectional doors.

**NOTE**

Do not use a metal object to set the DIP switches, because this may damage the DIP switches or the circuit board.

Use a suitable tool, for example a flat plastic object, to set the DIP switches.

<table>
<thead>
<tr>

10.15 Setting automatic closing function - defining basic values

When automatic closing is activated, the door is opened by a pulse. The door moves to the OPEN end position. The door closes automatically after the hold open time. With the factory settings, the door automatically closes from the partial opening position when the automatic closing function is activated.

**WARNING**
Risk of injury during automatic closing!
Automatically closing doors can injure people and animals in the movement area of the door when the door is closing. Serious injury or death may result.

► Always keep the moving door in sight.
► Keep persons and animals away from the range of movement of the door.
► Never put your hand near the door or near moving parts when the door is moving. In particular, do not reach into the ceiling holder or the push arm.
► Do not drive through the door until it has opened completely.

**NOTE**
If the door is not in view and the operator is actuated, objects in the movement area of the door may be jammed and damaged. Objects must not be in the range of movement of the door.

**INFORMATION**
The door opens completely if it hits an obstacle.

**INFORMATION**
Operation with automatic closing must comply with EN 12453. This is a legal requirement. National regulations must be observed in non-European countries. A photocell must be connected. Bridging the safety inputs with jumpers is not permitted.
10. Connections and special functions of the motor carriage

1. Close the door.
2. Set DIP switch 1 to “ON” position.
3. The pre-set hold open time of the door is 30 seconds. Every new command within these 30 seconds restarts the hold open time. The door OPEN position is reactivated by pressing button 1 on the transmitter. The door movement must be stopped with the transmitter.
4. The door closes automatically after 30 seconds. The closing movement can be stopped by a command with the transmitter.
5. The door starts the closing process again after 30 seconds.

INFORMATION
The factory setting is fully automatic closing with a pre-set hold open time of 30 seconds from the door OPEN end position and 60 seconds from partial opening. When driving through, the photocell is activated, and the hold open time is shortened to 5 seconds for sectional doors and side-opening sectional doors. This setting and the selection of semi-automatic closing can be adjusted via SOMLink and a WiFi-enabled device.

10.16 Setting the lighting function
The operator lighting on the motor carriage can be switched on and off separately via radio channel CH 2. This function is pre-set in the factory setting. Program the desired red handheld transmitter button to radio channel CH 2.
The factory setting of DIP switch 2 is “OFF,” and the lighting function is therefore always activated.

INFORMATION
The lighting function or partial opening can be operated.

1. Set DIP switch 2 to “OFF.”
2. Press the Radio button repeatedly to select the radio channel CH 2. Program the lighting function on the desired red transmitter button.

⇒ The lighting function is available.
The operator lighting can now be switched on and off with the corresponding transmitter button.

INFORMATION
If the operator lighting is not switched off manually, it switches off automatically after 60 minutes. This value can be changed via SOMLink and a WiFi-enabled device.

Other lights and functions are available with the accessory LumiPro+. The LumiPro+ is an LED strip with 12 LEDs (24 V, 4 W). It can be attached to the wall control unit as supplementary lighting.
The relay (potential-free contact) is pluggable and can be attached to the wall control unit. It can be used for controlling external lighting such as garage lights or outdoor lights. The maximum power is 5 A/AC 250 V or 5 A/DC 24 V.
Parallel to the operator lighting, the LumiPro+ and the relay are switched on with the “Start” impulse. The lighting time at 180 seconds is programmable. If the light function is activated via the radio control system or button 2, see chapter “11.5 Button 2 for partial opening.”

INFORMATION
The lighting function or partial opening can be operated.

10.17 Setting partial opening
This function allows you to set a desired partial opening. The door then does not open completely, but only to the desired position.

Example:
A side-opening sectional door can be opened to allow a person to pass through. The partial opening function is activated by pressing the corresponding transmitter button.

INFORMATION
The lighting function or partial opening can be operated.
10. Connections and special functions of the motor carriage

INFORMATION
The specified partial opening can be approached from any position of the door.

1. Close the door completely up to the door CLOSE end position.
2. Press the Radio button repeatedly to select radio channel CH 2 and to program the partial opening function to the desired transmitter button.
3. Set DIP switch 2 on the motor carriage to "ON."
4. Press the desired button on the transmitter for the partial opening function.
⇒ The door moves in door OPEN direction.
5. When the door reaches the desired partial opening position, press the button on the transmitter again.
⇒ The door stops at the desired position.
⇒ The partial opening function is programmed.

10.18 Deleting partial opening

1. Set DIP switch 2 on the motor carriage to "OFF."
2. Open the door completely up to the door OPEN end position.
⇒ Partial opening is deleted.

To program a new position, see Chapter "10.17 Setting partial opening."

10.19 Wicket door safety device

The wicket door safety device prevents operation of the door with open wicket doors.

1. The wicket door must be installed so that the switch reliably detects the open door.
Do not install the wicket door on the hinge side.
2. Connect the wicket door safety device on the terminal block on the motor carriage. The contact command is at 12 V DC, 10 mA. The normally closed contact is potential-free.
3. Check the function.

INFORMATION
If the wicket door is opened, the operator lighting on the motor carriage switches on. If the door closes, the operator lighting lights up for the set lighting time and then switches off. The lighting time can be modified with SOMlink and a WiFi-enabled device.

10.20 12 V output

The use of the 12 V output depends on the version of the motor carriage board. This output can be used for the power supply of external accessories. Two operating modes are available. 12 V DC, max. 100 mA are available for them.

INFORMATION
If the wicket door remains open longer than 60 minutes, the operator lighting switches off automatically after 60 minutes. This value can be changed via SOMlink and a WiFi-enabled device.

INFORMATION
If the control unit receives a new command with the wicket door open, the LEDs of the operator lighting change from permanent to flashing light.

Fig. 12 V output

Operating mode 1 (factory setting)
Power supply for external devices, for example finger scanners mounted in the door panel.

INFORMATION
Power-saving mode must be deactivated for this operating mode. Set DIP switch 3 on the wall control unit to "ON."
See chapter "13.4 Power-saving mode."

Operating mode 2 (external lighting)
In this operating mode, external lighting can be connected and switched via the CH 2 radio channel, for example lighting with LEDs. This operating mode only be activated via SOMlink and a WiFi-enabled device.
In the "Ek external lighting" operating mode, the OSE/8K2 act as a door panel.

INFORMATION
If the "External lighting" operating mode is used, the operator lighting works with reduced illumination power.
10. Connections and special functions of the motor carriage

10.21 SOMlink

SOMlink makes it possible for qualified specialists to change many functions and settings on the door operator. These include force and speed values as well as operating parameters and other convenient functions. If you would like to make changes, contact your specialist dealer.

INFORMATION
SOMlink is a combination of an additional device and a web-based application for changing door operator functions. Since safety-relevant values can also be changed, SOMlink is only sold to qualified specialists. All changes to settings via the SOMlink are logged.

INFORMATION
All operator parameters are reset to the factory settings by a factory reset. All settings via SOMlink and WiFi-enabled device are also reset. The DIP switches can only be manually reset.
11. Connections and special functions of the wall control unit

11. Connections and special functions of the wall control unit

11.2 Connection options to the wall control unit

Observe in particular the following safety instructions for this chapter.

**WARNING**

Danger of crushing and shearing!
The door can be actuated by a button. Persons who cannot see the door and are in the range of movement of the mechanism or the closing edges may be injured by crushing or shearing.

► Keypad and other command devices may only be installed within view of the door.
► Only use keypads or other command devices when you can see the movement of the door.
► All danger zones must be visible during the entire door operation.
► Always keep the moving door in sight.
► Keep persons and animals clear of the range of movement of the door.
► Never stand under the opened door.

**WARNING**

Danger due to hot surfaces!
After frequent operation, parts of the motor carriage or the control unit may become hot. If the control unit cover is removed and hot parts are touched, they may cause burns.

► Allow the operator to cool down before removing the cover.

**NOTE**

Never lay the control cable along a power line, as this could cause interference in the control unit. Observe the length of the control line, route it and secure it firmly to prevent displacement.

**INFORMATION**

The control unit detects a short-circuit between chain and track and then switches the operator off. If the short circuit is no longer present, the operator runs normally again.

**INFORMATION**

Control or regulating units in a fixed position must be mounted within sight of the door and at a height of at least 1.6 m.

**INFORMATION**

The power cable is approx. 1.2 m long.

**INFORMATION**

The maximum cable length for connected accessories is 25 m.

**INFORMATION**

If a photocell is used as a frame photocell, move the door to the centre position.
11. Connections and special functions of the wall control unit

11.3 Setting the DIP switches on the wall control unit

Special functions can be set with the DIP switches on the wall control unit. All DIP switches are set to "OFF" in the factory settings.

**NOTE**
Do not use a metal object to set the DIP switches, because this may damage the DIP switches or the circuit board. Use a suitable tool, for example a flat plastic object, to set the DIP switches.

<table>

* e.g.: door status dip lay

11.4 Button assignment of wall control unit

**Factory settings of the functions of the membrane keypads**
- Membrane keypad T1 – pulse sequence
- Membrane keypad T2 – lighting function or partial opening, dependent on DIP switch 2 on motor carriage

**Setting options**
If DIP switch 1 is set to "ON" on the wall control unit:
- Membrane keypad T1 – defined OPEN
- Membrane keypad T2 – defined CLOSE

11.5 Button 2 for partial opening

If required, a further button can be connected to the control unit for partial opening operation.

After installation of the keypad, all settings must be made on the ceiling control unit and the motor carriage.

**NOTE**
The control unit cover is connected to the circuit board of the wall control unit via a connection cable. If an accumulator has been installed, it is also connected to the circuit board. Carefully remove the control unit cover and disconnect the connections to prevent damage to the wall control unit.

**INFORMATION**
If button 2 (partial opening) is used, a photocell cannot be connected. The automatic closing operating mode is then not possible.
11. Connections and special functions of the wall control unit

Installing the keypad
1. When installing the potential-free keypad, select a suitable position at a height of at least 1.6 m.
2. Install the keypad.
3. Route the keypad cable to the wall control unit and secure it firmly to prevent displacement.

Installing the control cable and settings on the wall control unit
1. Disconnect the operator from the mains voltage. Check it is disconnected from the power supply.
2. Unscrew the light cover from the wall control unit and remove it upwards. Hold the front cover firmly while doing so.
3. Remove the control unit cover gently towards the front and unplug the control cable from the wall control unit, see Chapter "7.3 Light and control unit cover of the wall control unit."
4. If an accumulator is used, it must also be disconnected, see Chapter "11.12 Installing and removing the accumulator."
5. Remove the control unit cover.

6. Connect the cable of button 2 to the terminal block for COM and Signal. ⇒ Button 2 is now connected.
7. Set DIP switch 4 on the wall unit to "ON."
8. Plug in the control cable for the button and for the accumulator, if necessary.
9. Close the control unit in the reverse order, see Chapter "11.12 Installing and removing the accumulator" and "7.3 Light and control unit cover of the wall control unit."
10. Supply the operator with the mains voltage. Check that the power supply is now connected.

Settings on the motor carriage
To determine the partial opening door position, the following settings must be made on the motor carriage.
1. Close the door completely up to the door CLOSE end position.
2. Open the motor carriage, and enter "7.1 Cover of the motor carriage."
3. Set DIP switch 2 on the motor carriage to "ON."
4. Press button 2 for the partial opening function. ⇒ The door moves in door OPEN direction.
5. Press button 2 again for the desired position for stopping. ⇒ The door stops at the desired position.

11.6 Deleting partial opening
1. Set DIP switch 2 on the motor carriage to "OFF."
2. Open the door completely up to the door OPEN end position. ⇒ Partial opening is deleted.
To program a new position, enter "10.17 Setting partial opening."

11.7 Photocell and frame photocell
A 2-wire photoelectric sensor from SOMMER or a 4-wire photoelectric sensor can be connected to the control unit. The control unit automatically detects which version it is and sets itself to that one.

INFORMATION
If a photocell is retrofitted on a programmed system, the control unit must be reset, see chapter "10.13 Performing a reset."
11. Connections and special functions of the wall control unit

**INFORMATION**
When starting and during programming of the photocell, it must not be triggered by persons or objects.

**INFORMATION**
If a photocell is used as a frame photocell on the door, move the door to the centre position.

**Frame photocell**
1. Install the frame photocell in the frame, see separate "Frame photocell" installation instructions.
2. Align the frame photocell and connect it to the wall control unit.
3. Initial operation is performed as described in chapter "9. Initial operation."
   ⇒ When the door passes the frame photocell, the illumination power of the operator lighting is reduced.
   If the illumination power is not reduced, the frame photocell must be realigned. The wall control unit must also be reset.
   ⇒ During initial operation, the operator learns the exact position of the frame photocell in order to blank it out in normal mode shortly before reaching the door.
4. Check the frame photocell function.

**11.8 Wallstation**
Other functions are available with the Wallstation.
For example, a true command can be used to stop the operator when opening and closing the door.
Turning the lighting on and off
Locking or unlocking the operator

**Installing the Wallstation**
See the separate instructions for the "Wallstation" for installation.
The following conditions must be met for installation of the Wallstation:
• a second separate access point
• a suitable position with minimum height of 1.6 m.
1. Install all the Wallstation.
2. The cable from the Wallstation to the wall control unit must be firmly routed and secured to prevent displacement.
3. Connect the Wallstation to the button terminal.
4. The power-saving mode must be deactivated. To do this set DIP switch 3 on the wall control unit to "ON."

**Functions of the buttons**
• Opening, stopping and closing the door
• Turning the lighting on and off
• Locking or unlocking the operator

**Fig. Wallstation**

**Fig. Button interconnection**

**INFORMATION**
The connection features a polarity-protected 2-wire bus.
### Opening, closing and stopping the door

1. Press the button (1) to open and close.
   - The door opens or closes depending on the starting position.

2. Press the button (1) during the opening or closing process.
   - The door stops:

3. Press the button (1) again.
   - The door moves into the respective starting position.

### Turning the lighting on and off

The button (2) lights up green when the Wallstation is ready for operation and the operator is not locked.

1. Press the button (2).
   - Operator lighting switched on

2. Pressing the button (2) again switches the operator lighting back off.
   - Operator lighting off.

---

**INFORMATION**

If the operator lighting is not switched off manually, it switches off automatically after 60 minutes. This value can be changed via SOMlink and a WiFi-enabled device.

---

**Locking or unlocking the operator**

Unauthorized access can be prevented by locking the operator. For example, in the absence of the user or to prevent unintentional activation with a handheld transmitter.

The following functions are deleted in the factory setting when the lock button is actuated:

- Radio (handheld transmitter)
- Sensor ventilation function
- Command device (remote control button)

**To lock:**

The button (2) on the Wallstation lights up green when the operator is unlocked. The button (2) lights up red when the operator has been locked by the Wallstation.

1. Press and hold the button (3) for at least 5 seconds with the door closed.
   - Button (2) flashes green.
   - After 5 seconds, button (2) lights up red.
   - Locking function activated.

   All the functions of the operator are locked.

---

**INFORMATION**

If the door was still open, it can be closed using the handheld transmitter. Only then are all operator functions locked.

**To unlock:**

1. Press the button (3) for at least 5 seconds.
   - Button (2) flashes green.

   All the functions of the operator are activated again.

---

**INFORMATION**

All locking and unlocking functions can be modified and adjusted with SOMlink and a WiFi-enabled device. For more information, ask your specialist dealer.

### Conex

Two remote control buttons are connected to the KEYPAD and the Conex accessory part. The function of the remote control buttons can be configured via a Dip switch of the wall control unit. The factory setting of Dip switch 1 is "OFF."

---

**Figure: Keypad connection**

The Conex accessory part is plugged into the KEYPAD socket. The diagram shows "Conex" instruction icons.

**DIP switches on the wall control unit**

www.garagedoorsonline.co.uk 01926 463888
11. Connections and special functions of the wall control unit

11.10 Output OC

The door status display can be shown with the Output OC (open collector output) accessory part. To do this set DIP switch 2 on the wall control unit to "ON."

![Fig. Relay slot for Output OC](image)

The Output OC accessory part is plugged into the Relay slot, see separate "Output OC" instructions.

11.11 Relay

External lighting as the garage light, outdoor light or door status display can be controlled with the relay accessory part. The function depends on the setting of the DIP switch. See also chapter "11.3 Setting the DIP switches on the wall control unit."

![Fig. Relay slot](image)

The Relay is plugged into the Relay slot on the wall control unit, see separate "Relay" instructions. The maximal switching capacity is 5 V, 250 V AC or 5 A, 24 V DC.

11.12 Installing and removing the accumulator

The accumulator can bridge approximately 5 cycles within 12 hours in the event of a power failure. Only a qualified electrician is permitted to install, test and replace the accumulator. See Chapter "7.1 Cover of the motor carriage." Follow the instructions in the separate installation and operating manual for the accumulator.

![Fig. 1](image)

1. Disconnect the operator from the mains supply. Check that the operator is disconnected from the power supply.
2. Unplug the operator from the wall control unit and remove it upwards. Hold the front control unit firmly while doing so, see "7.3 Light and control unit cover of the wall control unit."
3. Remove the control unit gently towards the front and unplug the membrane keypad from the control panel.

NOTE

If an accumulator has been installed, it is connected to the circuit board. Carefully remove the control unit cover and disconnect the connections to prevent damage to the wall control unit.

INFORMATION

Initial operation is not supported if the accumulator is the sole power supply. Mains voltage is required for initial operation of the operator.

INFORMATION

The accumulator can only be recharged for a limited number of cycles. This depends on the use and settings.

Installing the accumulator

![Fig. 4](image)

4. Place the accumulator in the control unit and fasten with two cover binders

INFORMATION

Only an original accumulator from SOMMER may be used.
11. Connections and special functions of the wall control unit

Fig. 5

5. Place the control unit on the bottom of the wall control unit and plug the connection cable for the accumulator into the ACCU slot.

6. Set DIP switch 3 on the wall control unit to "ON."

7. Plug the connection cable for the membrane keyboard into the circuit board, see chapter "7.3 Light and control unit cover of the wall control unit."

8. Place the control unit cover on the wall control unit and screw on the light cover.

9. Press the button on the handheld transmitter to check the operator function.

⇒ The operator is powered by the accumulator.
⇒ Operator opens or closes the door at reduced speed.

10. Supply the operator with the mains voltage.

Check that the power supply is connected.

Removing the accumulator

The accumulator is removed in the reverse order, see chapter "11.12 Installing and removing the accumulator."

---

**DANGER**

Danger of hazardous substances!

Improper storage, use or disposal of accumulators, batteries and operator components are dangerous for the health of humans and animals. Serious injury or death may result.

- Accumulators and batteries must be stored out of the reach of children and animals.
- Keep accumulators and batteries away from embers, sparks and thermal influences.
- Do not recharge old accumulators and batteries.
- Components of the operator as well as old accumulators and batteries must not be disposed of with household waste. They must be disposed of properly.

---

**NOTE**

Dispose of all parts in accordance with local or national regulations to avoid environmental damage.

**INFORMATION**

All operator components that have been taken out of service must not be disposed of with household waste, as they contain hazardous substances. The components must be disposed of correctly at an authorised recycling centre. The local and national regulations must be observed.

Old accumulators and batteries must not be disposed of with household waste as they contain hazardous substances. These must be disposed of properly at municipal collection points or in containers provided by dealers. National guidelines must be observed.

If a photocell is retrofitted on a programmed system, the control unit must be reset, see Chapter "10.13 Performing a reset."

---

www.garagedoorsonline.co.uk 01926 463888
12. twin operation

12.1 twin operation

Two operators can be controlled with one control unit, for example in a double garage with two garage doors. Both operators are connected to one control unit for this purpose.

Mode of operation

If one of the operators receives a command and starts to move, the other operator is locked for this time. The other operator can only be started after the movement has stopped.

INFORMATION

Both operators cannot be operated at the same time.

12.2 Installing the operators

The installation of the operators is described here using an example.

1. Install the operators on the two doors as described in the chapter "Installation."

12.3 Selecting and configuring master and slave

Requirements

Both operators are configured as a master in the factory settings. The main communication with the control unit is effected via a master.

INFORMATION

No automatic closing function and no energy-saving mode are possible in twin operation.

1. Set DIP switches 1 and 3 on the wall control unit to "ON." This sets the membrane keypad T1 for the master and membrane keypad T2 for the slave.

![Fig. Membrane keypad T1 and T2 of wall control unit](image)

INFORMATION

Both operators cannot be operated at the same time.

<table>
<thead>
<tr>
<th>Terminal block</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>gn +</td>
<td>Track</td>
</tr>
<tr>
<td>rd -</td>
<td>Chain</td>
</tr>
</tbody>
</table>

2. Connect the operator (1) to the terminal blocks for a main (rd) and track (gn) of the wall control unit. The motor must be firmly red to prevent displacement.

3. Connect the wall control unit to the mains voltage. Check that the power supply is set.

4. Configure the operator (1) as the slave. To do this, assign a network ID to the motor via a WiFi-enabled device.

5. In the menu, under the "twin operation" settings, configure "Operator is slave" for the selected operator and save the entry. Check the entry.

6. Disconnect the wall control unit from the mains voltage.

7. Connect operator (2), the master, to the wall control unit in parallel to the terminal block for the main and track. The motor must be firmly red to prevent displacement.

8. Reconnect the control unit to the mains voltage.
12. twin operation

10. Programme the handheld transmitters for the respective operators a e b apert "10.4 Explanation of the radio channels" and "10.5 Programming the transmitter."

INFORMATION

Only one handheld transmitter button can be assigned per function. Undesired malfunctions could otherwise occur.

12.4 Partial opening

One partial opening a n be programmed for each of the two operators (ma e r and b a e ). Programming or deletion is performed as for the standard equipment, a e b apert "10.17 Setting partial opening" and "11.6 Deleting partial opening."

Example:

Ma e r on radio b annel CH 2 (partial opening) on handheld transmitter button 3. For the b a e , on radio b annel CH 2 (partial opening) on handheld transmitter button 4.

Corded

The input COM and sgnal on the wall control unit can be used for this purpose. DIP w itb 4 on the wall control unit mus t be "ON." The input is then no longer available for a photo cell.

Mode of operation

If button 2 (partial opening) is activated, the ma e r ree ie s the partial opening command. See a e b apert "10.17 Setting partial opening."

12.5 Defined opening and closing

The functions defined opening and b o o ng of the operators (ma e r and b a e ) a n only be o nfigured with the CH 3 and CH 4 radio annels. These e ntings are not available when o rded or v a the Conex a e s o ry part.

12.6 Door status display

During door movement and if the door is not b o o d, the relay (MUFU) trips DIP w itb 2 mus t be "ON." The relay remains at ia ted until both operators (ma e r and b a e ) are again at the door CLOSE end position.

12.7 Lighting for twin operation

The lighting a n be w itb ed on and off for the a l e ed operator i a the resp eet ie handheld transmitter. This also applies for the o nnet ed a pplemental lighting, a e a e Chapter "10.16 Setting the lighting function."

12.8 Photocell

Optionally, a photo e ll a n be o nnet ed. The photoe ll mus t be o nfigured in a a way that it a n be aligned to o e r two doors. If the photoe ll is interrupted, the operator of the moving door ree re s. See a e b apert "11.7 Photocell and frame photocell."

INFORMATION

If a photocell is retrofitted on a programmed system, the control unit must be reset, see Chapter "10.13 Performing a reset."

12.9 External button

With the Conex additional c ra it board, both operators (ma e r and b a e ) a n be operated in pulse e quence mode. Fit the Conex as desc ribed in the separate instructions. Set DIP w itb 1 on the wall control unit to "ON."

Mode of operation

Button 1 - ma e r
Button 2 - b a e

12.10 Reset

The b a e b ee mes the ma e r again when a fact or ree t is a ried out. The operator mus t be o nfigured as the b a e again v a SOMlink and a WiFi-enabled dev e , a e b apert "12.3 Selecting and configuring master and slave."

INFORMATION
13. Function test and final test

13.1 Testing obstacle detection

Observe in particular the following safety instructions for this chapter.

After initial operation of the operator, the force measurement of the operator must be checked with a force measurement device and an obstacle detection test must be performed.

⚠️ WARNING

**Danger due to projecting parts!**
Door leaves or other parts must not project into roads or public footpaths. This also applies while the door is moving. This may cause serious injury or death to persons or animals.

► Keep public roads and footpaths clear of projecting parts

⚠️ WARNING

**Danger of entrapment!**
If the force setting is too high, persons or animals in the movement area of the door may be trapped and pulled along with the door. Severe injuries or death may result.

► The force setting is relevant to safety and must be verified by a qualified specialist.

► You must proceed with extreme caution if you adjust the force setting.

⚠️ WARNING

**Danger of crushing and shearing!**
If the door moves and there are persons or animals in the movement area, crushing and shearing injuries may be caused by the mechanism and safety edges of the door.

► Note that obstacle detection does not operate below 50 mm.

► The obstacle detection must be tested once a month.

► Only use the operator when you have a direct view of the door.

► All danger zones must be visible during the entire door operation.

► Always keep the moving door in sight.

► Keep persons and animals clear of the range of movement of the door.

► Never put your hand near the door when it is moving or near moving parts.

► Do not reach into the ceiling suspension unit when the motor carriage is running along the track.

► Do not drive through the door until it has opened completely.

► Never stand under the opened door.

NOTE

Observe the national standards, guidelines and regulations for cut-off of the operating forces.

NOTE

The obstacle detection must be tested once a month to prevent damage to the operator.

INFORMATION

After installation of the operator, the person responsible for the installation of the operator must complete an EC Declaration of Conformity for the door system in accordance with Machinery Directive 2006/42/EC and apply the CE mark and a type plate. This documentation and the installation and operating manual for the operator must be handed over to the user. This also applies if the operator is retrofitted to a manually operated door.
13. Function test and final test

### INFORMATION
Reversing: The operator stops on contact with an obstacle and then moves a short distance in the opposite direction to release the obstacle.

In the automatic closing function, the door opens completely if an obstacle is detected.

### INFORMATION
The operating forces can be modified and adjusted with SOMlink and a WiFi-enabled device. For more information, ask your specialist dealer.

After successful testing of the force settings, the obstacle detection and the functions, the qualified specialist must issue the EC Declaration of Conformity and attach the CE mark and type plate to the door.

The operator must reverse in the door OPEN direction when it is loaded with a weight of 20 kg. The weight is fastened in the centre of the bottom edge of the door for this purpose.

The door must reverse during the door CLOSE movement if it hits a 50-mm-high obstacle on the ground.

1. Open the door with the operator.
2. Place a 50-mm-high object in the centre of the door.

![Fig. Example: Obstacle detection on a sectional door](http://som4.me/konform)

3. Close the door with the operator.

   ⇒ If the door hits an obstacle, the operator must reverse.

   ⇒ The operator opens the door completely at a pulse from the transmitter.

If the operator does not reverse, a position reset is required, after "10.13 Performing a reset." The positions and the forces must be reprogrammed.

### 13.2 Handover of door system
The qualified specialist must inform the user:
- on the operation of the operator and its dangers
- on the handling of the manual emergency release
- on the regular maintenance, testing and repair of the equipment during the "15. Maintenance and care"
- on the troubleshooting method during the "16. Troubleshooting."

The user must be informed about which work may only be performed by a qualified specialist:
- in the allation of accessories
- settings
- regular maintenance, testing and repair, with the exception described in chapter "15. Maintenance and care"
- troubleshooting, except that described in chapter "16. Troubleshooting."
- repairs

The following documents for the door must be handed over to the user:
- the installation and operating manuals for the operator and the door
- inspection book
- EC Declaration of Conformity
- handover protocol for the operator
14. Operation

14.1 Safety information on operation

In particular, observe the following safety instructions and the safety instructions in chapters "15. Maintenance and care" and "16. Troubleshooting."

The operator must not be used by persons with restricted physical, sensory or mental ability or who lack experience and knowledge. All users must be specially instructed and have read and understood the installation and operating instructions.

Children must never play with or use the operator, even under supervision. Children must be kept clear of the operator. Handheld transmitters or other command devices must never be given to children. Handheld transmitters must be safely stored and protected against unintended and unauthorised use.

**DANGER**

Danger if not observed!

If safety instructions are not observed, serious injury or death will result.
► All safety instructions must be complied with.

**DANGER**

Danger due to use of the operator with incorrect settings or when it is in need of repair!

If the operator is used despite incorrect settings or if it is in need of repair, severe injury or death may result.
► The operator may only be used with the required settings and in the proper condition.
► You must have faults repaired professionally without delay.

**WARNING**

Danger due to falling parts of doors!

Actuating the emergency release can lead to uncontrolled door movement if
► springs are weakened or broken.
► the door has not been optimally weight-balanced.

Falling parts may cause a hazard. Severe injuries or death may result.
► Check the weight balance of the door at regular intervals.
► Pay attention to the movement of the door when the emergency release is actuated.
► Keep persons and animals clear of the range of movement of the door.
► Keep clear of the movement area of the door.

**WARNING**

Danger of entrapment!

Persons and animals in the movement area of the door may be trapped and pulled along with the door. Severe injuries or death may result.
► Keep clear of the moving door.
14. Operation

**WARNING**

Danger of crushing and shearing!
If the door moves and there are persons or animals in the movement area, crushing and shearing injuries may be caused by the mechanism and safety edges of the door.

- Only use the operator when you have a direct view of the door.
- All danger zones must be visible during the entire door operation.
- Always keep the moving door in sight.
- Keep persons and animals clear of the range of movement of the door.
- Never put your hand near the door when it is moving or near moving parts. In particular, do not reach into the moving part arm.
- Do not reach into the ceiling safety unit when the carriage is running along the track.
- Do not drive through the door until it has opened completely.
- Never use and under the opened door.

**WARNING**

Danger due to optical radiation!
Looking into an LED at short range for an extended period may cause optical glare. This may temporarily reduce vision. This may cause serious or fatal accidents.

- Never look directly into an LED.

**NOTE**

If the weight compensation of the door is incorrectly adjusted, the operator may be damaged.

- The door must be stable.
- It must not bend, rotate or twist when opening and closing.
- The door must move easily in its tracks. Defects must be repaired without delay by a qualified specialist.

**NOTE**

Objects in the movement area of the door may be jammed and damaged. Objects must not be in the range of movement of the door.

**INFORMATION**

Keep this Installation and Operating Manual accessible at all times at the place of use.

14.2 Handover to the user

The user must ensure that the CE mark and the type plate have been attached to the door. The following documents for the door must be handed over to the user:

- the installation and operating manuals for the operator and the door
- inspection book
- EC Declaration of Conformity
- handover protocol

The qualified person must inform the user:

- on the operation of the operator and its dangers
- on the handling of the manual emergency release
- on regular maintenance, testing and care which the user can carry out

The user must be informed about which work may only be performed by a qualified person:

- inspection of the operator
- settings
- regular maintenance, testing and care which can be carried out by the user
- tests by a qualified specialist

The user must keep this installation and operating manual in the vicinity of the door at all times.

**WARNING**

Danger of crushing and shearing!
If the door moves and there are persons or animals in the movement area, crushing and shearing injuries may be caused by the mechanism and safety edges of the door.

**INFORMATION**

Keep this Installation and Operating Manual accessible at all times at the place of use.
14. Operation

14.3 Operating modes of door movement

**WARNING**
Danger of crushing and shearing!
The door can be actuated by a keypad or another command device.
Persons who cannot see the door and are in the range of movement of the mechanism or the closing edges may be injured by crushing or shearing.
- Keep ads or other command dev ee s may be ued only if the me ment of the door n be w ed dire tly.
- Keep pers ns and animals ear of the range of mo e ment of the door.
- Ne t s and under the opened door.

**INFORMATION**
All functions can be programmed for all buttons.

**Button 1 (CH 1)**

- Fig. Pulse queue for door OPEN, door STOP, door CLOSE, door STOP

**Button 2 (CH 2)**

- Fig. Pulse queue for partial opening: DIP switch 2 "ON"
- Lighting function: DIP switch 2 "OFF"

**Button 4 (CH 4)**

- Fig. Pulse queue for defined door CLOSE

www.garagedoorsonline.co.uk 01926 463888
14. Operation

14.4 Testing obstacle detection

The operator stops and reverses slightly if it encounters an obstacle. This prevents injury and damage to property. The door will be partially or completely opened depending on the setting.
The partial reversion is preset at the factory.
Full reversion on an be set via SOM link and a WiFi-enabled device.

INFORMATION
Reversing: The operator stops when it hits an obstacle. Then the operator moves slightly in the opposite direction to release the obstacle.
In the automatic closing function, the door opens completely.

The following safety devices are installed to detect obstacles:
• photo cell (object protection)
• safety contact strips (personal protection)
• obstacle detection of the operator (personal protection)

Here, also note chapter "15. Maintenance and care."

14.5 Power-saving mode

To save energy, the operator control unit switches to power-saving mode after the factory-specified period.
Connected accessories are deactivated and then react when triggered by a button or radio.
Connected accessories may include: photo cell, safety contact strips and external radio receiver.
Because external radio receivers are deactivated in power-saving mode, they cannot receive commands from the remote control and send them to the operator.
Set DIP switch 3 to "ON" to power the entire system continuously.
Power-saving mode is deactivated.

DIP switch on wall unit

<table>

<tr>
<td>6</td>
<td>Power-saving mode activated</td>
<td></td>
</tr>
</tbody>
</table>

INFORMATION
The factory-set period before the control unit switches to power-saving mode is 20 seconds. This value cannot be changed.

14.6 In the event of a power failure

The programmed force levels and end positions of the operator remain active in the event of a power failure. After the power supply has been restored, the first movement of the operator after a pulse is always door OPEN.
Also note the information on the emergency release in chapter "11.8 Installing and removing the accumulator" and "14.7 Function of the emergency release."

14.7 Function of the emergency release

In the event of a power failure, the door can be opened from the inside using a mechanical emergency release.
Observe in particular the following safety instructions for thisapter.

WARNING
Danger for trapped persons!
Persons may be trapped inside the garage. If trapped persons cannot free themselves, severe injury or death may result.
► Test the operation of the emergency release regularly from inside and if necessary, also from outside.
► You must have faults repaired professionally without delay.

WARNING
Danger due to falling parts of doors!
If the emergency release is actuated, weak or broken springs may cause the door to close suddenly and unexpectedly. This may cause serious or fatal injury.
► The emergency release could be used only with the door closed.
► Use the emergency release with great caution if the door is open.
► Keep persons and animals clear of the range of movement of the door.
14. Operation

NOTE
The emergency release is only suitable for opening or closing the door in an emergency. The emergency release is not suitable for regular opening or closing. This could cause damage to the operator and door. The emergency release must only be used in emergencies such as a power failure.

NOTE
During emergency release, the door could open by itself or close surprisingly quickly due to a broken spring or incorrect setting of the weight balancing. Damage to the door system could occur.

NOTE
After the operator is locked back in, move the door to the door OPEN end position. Otherwise the limit stop will be hit with too much force.

NOTE
Objects in the movement area of the door may be jammed and damaged. Objects must not be in the range of movement of the door.

INFORMATION
It can be locked and released in any door position.

1. Disconnect the operator from the mains voltage.

   Check it is disconnected from the power supply.

2. Pull once on the emergency release handle.

   ⇒ The motor carriage is released.
   ⇒ Door can be moved by hand.

3. Pull the emergency release handle once more.

   ⇒ The motor carriage is locked.
   ⇒ The door can only be moved by the operator.

4. Reconnect the operator to the voltage supply.

   Check that the power supply is on.

5. Give the operator a command.

   ⇒ After a power failure, the first pulse of the operator is always in the door OPEN direction.
   ⇒ The operator must drive completely to the door OPEN end position.

Fig. 2

Fig. 3

INFORMATION
It can be locked and released in any door position.

1. Disconnect the operator from the mains voltage.

   Check it is disconnected from the power supply.

2. Pull once on the emergency release handle.

   ⇒ The motor carriage is released.
   ⇒ Door can be moved by hand.

3. Pull the emergency release handle once more.

   ⇒ The motor carriage is locked.
   ⇒ The door can only be moved by the operator.

4. Reconnect the operator to the voltage supply.
15. Maintenance and care

15.1 Safety instructions for maintenance and care

Follow the basic safety instructions listed below.
Service the operator regularly as directed below.
This ensures safe operation and a long service life of your operator.

⚠️ DANGER

Danger if not observed!
If safety instructions are not observed, serious injury or death may result.
► All safety instructions must be complied with.

⚠️ DANGER

Danger due to electric current!
Contact with live parts may result in electric current flowing through the body. Electric shock, burns or death will result.
► All work on electrical components must be carried out by a trained electrician.
► Disconnect the mains plug before working on the operator.
► If an accumulator is connected, disconnect it from the control unit.
► Check that the operator is not live.
► Secure the operator against being switched on.

⚠️ WARNING

Danger for trapped persons!
Persons may be trapped inside the garage.
If trapped persons cannot free themselves, severe injury or death may result.
► Test the operation of the emergency release regularly from inside and if necessary, also from outside.
► You must have faults repaired professionally without delay.

⚠️ WARNING

Danger due to falling parts of doors!
Parts of the door may become detached and fall. If persons or animals are hit, this may cause serious injury or death.
► Always keep the moving door in sight.
► Keep all persons and animals away from the door until it is completely opened or closed.

⚠️ WARNING

Danger of falling!
Unsafe or defective ladders may tip and cause fatal or serious accidents.
► Use only a non-slip, stable ladder.
► Ensure that ladders are firmly positioned.
15. Maintenance and care

15.2 Maintenance schedule

<table>
<thead>
<tr>
<th>How often?</th>
<th>What?</th>
<th>How?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Once a month</td>
<td>• Test the emergency release</td>
<td>• See chapter &quot;14.7 Function of the emergency release&quot;</td>
</tr>
<tr>
<td>One a year</td>
<td>• Test obstacle detection</td>
<td>• See chapter &quot;14.4 Testing obstacle detection&quot;</td>
</tr>
<tr>
<td>As needed</td>
<td>• Test the door and all moving parts</td>
<td>• As directed by the door manufacturer</td>
</tr>
<tr>
<td>As needed</td>
<td>• Check screws on door, ceiling or lintel</td>
<td>• Check that screws are tight and tighten if necessary</td>
</tr>
<tr>
<td>As needed</td>
<td>• Clean the housing of the wall control unit and motor carriage</td>
<td>• See chapter &quot;15.3 Care&quot;</td>
</tr>
</tbody>
</table>

**NOTE**

The motor carriage is supplied with safety low voltage via the chain and the track. The use of oil or grease will greatly reduce the conductivity of the chain, track and motor carriage. This may result in faults due to inadequate electrical contact. The chain and track are maintenance-free and must not be oiled or greased.

**NOTE**

The use of unsuitable cleaning agents may damage the surface of the operator. Clean the operator with a dry lint-free cloth only.
15. Maintenance and care

15.3 Care

Clean track, motor carriage and wall control unit

1. Pull the power plug out of the power outlet.
   If an accumulator has been installed, remove the wall control unit and disconnect the accumulator from the wall control unit. See also chapter "11.12 Installing and removing the accumulator."
   Then check that the power is disconnected.

2. Remove loose dirt with a moist, lint-free cloth:
   • from the motor carriage and the wall control unit
   • from the track and the inside of the track

3. If required, install the accumulator in reverse order of removal.
   Re-connect the operator to the mains voltage.
   Check the power supply.
   ⇒ The operator is supplied with voltage.

Cleaning the photocell

Fig. 1

NOTE
Do not change the position of the photocell when cleaning it.

1. Clean the housing and reflectors of the photocell with a damp, lint-free cloth.
16. Troubleshooting

16.1 Safety instructions for troubleshooting

Follow the basic safety instructions listed below.

⚠️ **DANGER**

**Danger if not observed!**

If safety instructions are not observed, serious injury or death may result.

- All safety instructions must be complied with.

⚠️ **DANGER**

**Danger due to electric current!**

Contact with live parts may result in electric current flowing through the body. Electric shock, burns, or death may result.

- All work on electrical components must be carried out by a trained electrician.
- Disconnect the mains plug before working on the operator.
- If an accumulator is connected, disconnect it from the control unit.
- Check that the operator is not live.
- Secure the operator against being switched on.

⚠️ **WARNING**

**Danger of falling!**

Unsafe or defective ladders may tip and cause serious or fatal accidents.

- Use only a non-slip, stable ladder.
- Ensure that ladders are firmly positioned.

⚠️ **WARNING**

**Danger for trapped persons!**

Persons may be trapped inside the garage. If trapped persons cannot free themselves, severe injury or death may result.

- Test the operation of the emergency release regularly from inside and if necessary, also from outside.
- You must have faults repaired professionally without delay.

⚠️ **WARNING**

**Danger due to falling parts!**

Parts of the door may become detached and fall. Persons may be hit. Severe injuries or death may result.

- Always keep the moving door in sight.
- Keep all persons and animals away from the door until it is completely opened or closed.
- Do not drive through the door until it has opened completely.

⚠️ **WARNING**

**Danger of entrapment!**

Loose clothing or long hair may be trapped by moving parts of the door.

- Keep clear of the moving door.
- Always wear tight-fitting clothing.
- Wear a hairnet if you have long hair.
16. Troubleshooting

WARNING

**Danger of crushing and shearing!**
If the door moves and there are persons or animals in the movement area, crushing and shearing injuries may be caused by the mechanism and safety edges of the door.

► Only use the operator when you have a direct view of the door.
► All danger zones must be visible during the entire door operation.
► Always keep the moving door in sight.
► Keep persons and animals clear of the range of movement of the door.
► Never put your hand near the door when it is moving or near moving parts in particular, do not reach into the moving push arm.
► Do not reach into the ceiling suspension unit when the motor carriage is running along the track.
► Do not drive through the door until it has opened completely.
► Never stand under the opened door.

WARNING

**Danger due to optical radiation!**
Looking into an LED at short range for an extended period may cause optical glare. This may temporarily reduce vision. This may cause serious or fatal accidents.

► Never look directly into an LED.

WARNING

**Danger due to hot surfaces!**
After frequent operation, parts of the motor carriage or the control unit may become hot. If the cover is removed and hot parts are touched, they may cause burns.

► Allow the operator to cool down before removing the cover.

NOTE

If the door is not in view and the radio remote control is actuated, objects in the movement area of the door may be jammed and damaged. Objects must not be in the range of movement of the door.

INFORMATION

The control unit detects a short-circuit between chain and track and then switches the operator off. If the short circuit is no longer present, the operator runs normally again.

16.2 Troubleshooting

The following guide to troubleshooting lists potential problems and their causes and information on correcting them. In some cases, other chapters and sections with a more detailed description are referenced. You will be prompted to call a qualified specialist if this is required. Work on the electrical system and live parts must be performed by a trained electrician.

1. Pull the power plug out of the power outlet. If an accumulator has been installed, remove the ceiling control unit cover and disconnect the accumulator from the control unit, see Chapter “7.3 Light and control unit cover of the wall control unit” and Chapter “11.12 Installing and removing the accumulator.” Then check that the power supply is connected.

⇒ The operator is supplied with mains voltage.

2. After working on the operator, if applicable replace the accumulator in reverse order.

3. Connect the operator to the mains voltage. Check that the power supply is connected.

⇒ The operator is supplied with mains voltage.
16. Troubleshooting

### 16.3 Time sequences of operator lighting in normal mode and in case of faults

16.5 Replacing the motor carriage

The instructions for "Disassembling the motor carriage" can be downloaded from SOMMER at: www.sommer.eu

If applicable, the existing settings on the device are saved in a SOMlink and a WiFi-enabled device. The settings are transferred to the new motor carriage later. The new motor carriage is in delivery condition from the factory. If replacement of the motor carriage is required, the motor carriage must be reinstalled and repaired by a qualified specialist.

Initial operation must be repeated, and the special functions of the motor carriage must be reset, see chapter "9. Initial operation" and "10. Connections and special functions of the motor carriage."

Handheld transmitters which are used must also be reprogrammed, see Chapter "10.5 Programming the transmitter." On the other hand, handheld transmitters do not have to be programmed if the Memo accessory part has already been used.

After successful initial operation, run a function test and a final test, see chapter "13. Function test and final test."

**INFORMATION**

Save the existing settings of the motor carriage with the help of SOMLink and a WiFi-enabled device. After the new motor carriage has been inserted, reinstall the data.
17. Taking out of operation, storage and disposal

17.1 Taking the operator out of operation and disassembly

Follow the basic safety instructions listed below. Persons under the influence of drugs, alcohol, or medications that can influence their ability to react may not work on the operator.

The assembly and disposal of the operator must be performed by a qualified specialist. This Installation and Operating Manual must be read, understood and complied with by a qualified electrician who disassembles the operator.

**DANGER**

Danger if not observed!

If safety instructions are not observed, serious injury or death may result.

► All safety instructions must be complied with.

**DANGER**

Danger due to electric current!

Contact with live parts may result in electric current flowing through the body. Electric shock, burns or death will result.

► All assembly work on electrical components must be carried out by a trained electrician.

► Disconnect the power plug before disassembling the operator.

► If an accumulator is connected, disconnect it from the control unit.

► Check that the operator is not live.

► Secure the operator against being switched on.

**WARNING**

Danger due to optical radiation!

Looking into an LED at short range for an extended period may cause optical glare. This may temporarily reduce vision. This may cause serious or fatal accidents.

► Never look directly into an LED.

**WARNING**

Danger due to hot surfaces!

After frequent operation, parts of the motor carriage or the control unit may become hot. If the cover is removed and hot parts are touched, they may cause burns.

► Allow the operator to cool down before removing the operator.

**WARNING**

Risk of eye injury!

Eyes and hands may be seriously injured by chips when removing screws.

► Wear safety glasses.

**WARNING**

Risk of injury in the head region!

Impact with suspended objects may cause serious abrasions and cuts.

► You must wear a safety helmet when disassembling the operator.

www.garagedoorsonline.co.uk 01926 463888
17. Taking out of operation, storage and disposal

**CAUTION**
Risk of injury to hands!
Rough, projecting metal parts may cause abrasions and cuts when touched.
► Wear safety gloves.

**NOTE**
If there is an accumulator in the control unit, it must be removed by a trained electrician. See chapter "11.8 Installing and removing the accumulator."

The operator and its accessories must be disconnected from electrical power when taking them out of operation or during disassembly.

1. Pull the power plug out of the power outlet.
   If an accumulator has been installed, remove the control unit and disconnect the accumulator from the control unit, see also chapter "11.8 Installing and removing the accumulator."
   Then check that the power is disconnected.
2. Disassembly is in reverse order of installation.

17.2 Storage
Store the packaging units as follows:
- in enclosed, dry rooms so that they are protected from moisture
- at a storage temperature from \(-25 \, ^\circ\text{C}\) to \(+65 \, ^\circ\text{C}\)
- secure to prevent falling
- leave room for unhindered passage

**NOTE**
Improper storage may damage the operator. The operator must be stored in closed and dry rooms.

17.3 Disposal of waste
Observe the instructions for disposal of packaging, components, batteries and, if applicable, the accumulator.
17. Taking out of operation, storage and disposal

**NOTE**
Dispose of all components in accordance with local or national regulations to avoid environmental damage.

**INFORMATION**
All operator components that have been taken out of service must not be disposed of with household waste, as they contain hazardous substances. The components must be disposed of correctly at an authorised recycling centre. The local and national regulations must be observed.

**INFORMATION**
Old accumulators and batteries must not be disposed of with household waste as they contain hazardous substances. These must be disposed of properly at municipal collection points or in the containers provided by dealers. National guidelines must be observed.
18. Short instructions for installation

The short instructions describe the installation of variants A/B.

The short instructions do not replace the installation and operating manual. Read this installation and Operating Manual carefully and, most importantly, follow all warnings and safety instructions. This will ensure that you can install the product safely and optimally.
19. Connection diagrams and functions of the DIP switches

![Motor Carriage Connection Diagram](image-url)

![Wall Control Connection Diagram](image-url)

When connecting external devices, power-saving mode must be disabled to ensure the power supply.
