ROLLE GARAGE DOORS
BY GLIDEROL
SPACE-SAVING, SAFE AND MADE-TO-MEASURE

For over 3 decades GLIDEROL have been manufacturing quality and reliable roller garage doors in the UK. Made from the very best components, equipped with state-of-the-art technology, safety features and equipment, the doors require little maintenance and are a safe investment.

GLIDEROL garage doors travel vertically and provide more clearance inside and outside of the garage when compared to conventional up-and-over, as well as sectional and swing doors. The doors can be opened conveniently even with the car parked directly in front or behind it.

Available Colours Are:

Painted finishes (eggshell finish):
* Colour available in Gliderol Insulated Roller Door Compact*

Laminate finishes (woodgrain eggshell finish):

A Note Concerning Colours: Door guides are available in colours matching the door curtain except laminate door colours (supplied in brown). Coloured guide rails are supplied as standard, however they may not exactly match the lath colour. The manufacturing process for the lath profile results in a textured finish, whilst all other coloured items (guides, bottom laths, lock laths, optional fascias and vision panels) are supplied in a satin finish so cannot be guaranteed to match exactly. Over time, some scuffing may occur on front and rear surfaces of doors as a result of their normal operation.

Some price as standard painted finish
Gliderol Insulated Roller Door is fitted with easy to use, state-of-the-art drive technology allowing the door to be opened or closed by means of a compact hand transmitter or wall mounted control box.

**Emergency release**
For doors without any other entrance door, there is a lockable emergency release to be operated from outside.

**Safety**
The door reverses automatically should the downward movement of the door be restricted.

**Security**
The risk of another handset using the same code is eliminated as the transmitter uses a different code from one of two billion after every operation.

**Quiet Operation**
Noise is reduced as the motor is housed entirely within the roll of the door giving a quiet and smooth performance.

**Automatic Light**
Lights your garage for up to 90 seconds after the motor is activated allowing you to drive into an illuminated garage.

**Gliderol Roller Door**
Gliderol's Roller Garage Doors have been designed and manufactured in the UK for over 30 Years from strong, corrosion protected steel and are made to suit most garage openings, adding style and character to any home.

In addition to being built to operate with minimal noise and friction, Gliderol Roller Doors are specifically designed with a reinforced bottom rail to protect your home against intruders.

**Gliderol Insulated Roller Door**
Gliderol's Insulated Roller Door is an intelligent design solution creating a smart and stylish door that features vertical travel, insulation, all round weather protection and remote control operation as standard - quite a package!

The most compact garage door type, the door rolls neatly around a barrel above the door, using the very minimum of space inside the garage.

  - Fully CE compliant and manufactured within audited ISO 9001 quality systems.

- **For large surfaces**
  - Up to 5.2m wide and 3.2m high.

**Should I insulate my garage door?**

**Insulate, of course is the common answer, but is it the smart answer in all instances?**

The majority of garages are unheated and fitting an insulated door makes no difference to that fact! With no energy to be saved, a single skin door (Gliderol Roller Door) can provide the best option. With GLIDEROL, you have a choice.

Gliderol Insulated Roller Door Manual
Insulated Manual Roller Door

The main image shows a door with a full box option and a cut-away to show the motor end and the manual crank in position. The motors have ample power to lift the door smoothly and quietly and once set up will operate reliably for years. The half box option provides a fascia for the door curtain to close against and a top cover to stop dust and dirt dropping into the mechanism.

Excellent weather resistance with a rubber compression seal to the bottom of the door and a brush strip within the guides.

Gliderol Insulated Roller Doors take up very little space inside your garage. The standard configuration, using 77mm foam filled lath, requires 300mm of headroom and is supplied with 70 or 90mm guides depending on specification. The compact version, using 55mm foam filled lath, requires only 205mm of headroom and is supplied with 65mm guides.
GLIDEROL INSULATED ROLLER DOOR

Durable bottom seal on the underside of the door prevents leaves and other undesirable materials entering your garage from outside.

Weatherseal
No oiling or greasing, just an occasional clean of the guides with white spirit and the door surface with warm soapy water.

Minimal Maintenance
Rolls up vertically and does not swing out in front of the garage. You can park right up to the door and have more storage space in the roof of the garage.

Easy to Operate
Easy to open and close with minimum noise and friction giving reliable performance at all times.

Security
Unique profile and aluminium bottom rail reinforce our roller doors against intruder penetration.

Locking
The double-sided locking system is operated from the central handle and locks from both the inside and outside of the door. No lock is supplied on automatic doors.

- Mahogany Woodgrain*

* Laminate finish. The colours are printed and may not match exactly. Steel colour switches are available.

**Technical Information**

Gildermatic doors require an extra 20mm side clearance on the side the drive unit is required to be fitted.

Sizes - Up to 5 metres wide and 3 metres high (up to 4.9 metres for B-series – ask for details). Requires no frame so enables the maximum possible opening width for the wider vehicle. Door sits behind the brickwork so can be fitted in arched and unusual garage door openings.

Windlock system - should be specified for double doors in very exposed locations and greater side room clearance is required. For advice and information, speak to our technical department or your supplier.

Converting to automatic - whilst manual doors can be easily converted to automatic later, there is a significant cost saving if the unit is factory-fitted at the outset.

Guarantees - so long as the door is correctly installed and reasonably maintained, 2 years electrical, 6 years mechanical and 10 years on the door finish. CE tested and approved. Ask for details.
