“A good reputation must be earned.”

August Hörmann

In line with the founder's philosophy, the Hörmann brand today is a true promise of quality. The family-owned company has over 80 years of experience in door and operator construction and, with sales of over 20 million doors, is no. 1 in Europe. This makes a Hörmann operator a reassuring purchase.

1 Brand quality “Made in Germany”

All fundamental doors and operator components are developed and manufactured by Hörmann, are **perfectly matched to each other** and **tested and certified** by independent, recognised institutes to ensure your safety. They are manufactured in Germany according to the DIN ISO 9001 quality management system and meet the requirements of European standard 13241-1. Furthermore, our highly qualified employees work intensively on new products, continual further developments and improvements to details. The results are patents and one-of-a-kind products you can depend on.

2 Door operators for generations

Endurance tests under real-life conditions ensure mature series products with Hörmann quality. Thanks to this, as well as excellent technical solutions and uncompromising quality assurance, you receive **a 5-year warranty on all Hörmann garage door and entrance gate operators.***

* The complete warranty conditions can be found at: www.hormann.co.uk

3 An eye on the future

Hörmann is setting a good example. This is why the company obtains **100 % of its required energy from green sources**. At the same time, many tonnes of CO₂ are saved each year thanks to the introduction of an intelligent and certified energy management system. And last but not least, Hörmann offers products for sustainable construction.

4 BiSecur radio system with certified security

Only from Hörmann

The bi-directional radio system BiSecur is based on **future-oriented technology** for the convenient and secure operation of garage and entrance gate operators, door operators, lights and more. The extremely secure BiSecur encryption protocol, developed by Hörmann, with a stable, interference-free range makes sure that no-one can copy your radio signal. It was tested and certified by security experts at Bochum University.

Watch the video at: www.hormann.co.uk/videos

5 Perfectly matched and 100 % compatible

All BiSecur operators, receivers and control elements are 100 % compatible. Using a hand transmitter or radio code switch, for example, you can conveniently operate your garage door as well as an entrance gate equipped with a Hörmann operator, your door operators or other devices with BiSecur receivers.

With our app* and Hörmann BiSecur gateway, it is easy to control your Hörmann garage door or entrance gate operators, Hörmann entrance door** or the internal door operator PortaMatic as well as other devices using your **smartphone or tablet**.

* For smartphones or tablets with iOS and Android operating system

** To use this function it is required that your Hörmann entrance door ThermoCarbon / ThermoSafe is equipped with the automatic lock S5 / S7 Smart.

6 Convenient querying of the door position

You no longer have to go out in any wind and weather to check if your door is closed. At the press of a button, the colour of the LED on the hand transmitter HS 5 BS indicates the position of the door. If required, another push of a button*** closes the door. It is the most comfortable and secure way to control your door.

*** An additional photocell is required for operation without visual contact to the door

7 Award-winning design

In addition to a black or white design, the **exclusive BiSecur hand transmitters** are characterised by an elegant shape that fits easily in the palm of your hand.

Hörmann's BiSecur hand transmitters with an optional high-gloss surface in a piano lacquer look have received the reddot design award for their exclusive design.

Watch the video at: www.hormann.co.uk/videos

Figure above: hand transmitter HS 5 BS with hand transmitter station (optional).

Benefit from numerous advantages

Hörmann operators are distinguished by a successful combination of quality, security and intelligent technology: the boom-guided operator patent guarantees stable, quiet door travel; the soft start and soft stop function increase the service life of your door. Proven security functions give you a feeling of safety: a locking mechanism that engages when the door is closed protects the door from being forced open; on encountering an obstruction, the automatic safety cut-out immediately stops the door. Useful additional functions round off the comfort: ventilate your garage with a second opening height, for example, without the need to open the entire door. For garages without a power connection, use the powerful ProMatic battery with optional solar panel.

1

Safe

Only from Hörmann

Mechanical anti-lift kit in the operator boom

Burglars have a tough time when it comes to Hörmann automatic garage doors: when the garage door is closed, the **anti-lift kit** automatically engages in the guide rail stop. The door locks immediately and is secured against forced opening. This lock is purely mechanical and, in contrast to operators from other manufacturers, effective even in the event of a power failure.

Watch the video at: www.hormann.co.uk/videos

2

Reliable

The reliable automatic **safety cut-out** securely stops the door if it encounters an obstacle. For even more protection and safety, we recommend fitting a non-contact photocell. This is a standard feature in the Hörmann SupraMatic P operator.

Your door opens and closes quietly and smoothly with the soft start and soft stop. The start and stop phases can be individually set for your garage door. This protects your garage door, allowing you to enjoy it for years to come.

3 Super-fast

You can enter faster and more safely with the SupraMatic operator when combined with a Hörmann sectional garage door. **An up to 50 % faster opening speed** means more safety and less stress on high-traffic garage entrances. Compare the opening speed of the SupraMatic operator with conventional operators.

Watch the video at: www.hormann.co.uk/videos

4 Certified

Hörmann garage door operators are perfectly matched to the sectional garage doors and have been tested and certified in accordance with the TTZ directive "Break-in resistance for garage doors" **by independent test institutes.**

SupraMatic – the supra-fast operator with many additional functions

With the combination of speed and convenience, your sectional garage door opens faster and you can drive directly from the street into your garage. The SupraMatic has many additional functions, such as being able to switch the operator lighting on and off with your hand transmitter, and the convenient option of an additional opening height to ventilate your garage. An operator cover made of brushed aluminium also provides the SupraMatic with a very elegant appearance.

| Garage door operators | SupraMatic E | SupraMatic P |
|-----------------------|----------------------|--|
| Special feature | | For timber doors and doors with wicket doors |
| Equipment | | Photocell |
| Cycles per day / hour | 25 / 10 | 50 / 10 |
| Pull and push force | 650 N | 750 N |
| Peak force | 800 N | 1000 N |
| Max. opening speed | 22 cm/s | 22 cm/s |
| Max. door width | 5500 mm | 6000 mm |
| Max. door surface | 13.75 m ² | 15 m ² |

As standard with the 5-button hand transmitter HS 5 BS and 4-button hand transmitter HSE 4 BS with black textured surface.

1 Convenient querying of the door position

You can use the standard HS 5 BS hand transmitter at any time to check that your garage door is closed.

2 Faster door opening

An up to 50 % faster opening speed gets you from the street into your garage sooner.

3 Additional opening height

With the individually adjustable opening height, you can ventilate your garage without completely opening the door. Ventilation can be automatically regulated using the new, optional climate sensor. For further information, see pages 46 / 47.

4 Separately switchable operator light

The LED lighting with energy efficiency class A++ can be switched on and off separately via your hand transmitter or the IT 3b optional internal push-button unit.

5 Easy-to-use programming

All of the operator functions can be set very easily by entering a two-digit number.

6 High security

The standard photocell EL 101 included with SupraMatic P immediately detects persons and objects. Families with children especially appreciate this level of safety.

ProMatic – the good-value starter model as an introduction to Hörmann's premium quality

ProMatic garage door operators feature the same proven Hörmann technology as all Hörmann premium operators. This guarantees reliable function – at an attractive price. Even in a garage without a mains connection, you can enjoy the comfort and convenience of an operator. The ProMatic Akku makes it possible. Easy to transport, it can be recharged in a matter of hours, conveniently via the optional solar module.

| Garage door operators | ProMatic | ProMatic Akku |
|-----------------------|----------------------|--------------------------------------|
| Special feature | | For garages without power connection |
| Cycles per day / hour | 12 / 5 | 5 / 2 |
| Pull and push force | 600 N | 350 N |
| Peak force | 750 N | 400 N |
| Max. opening speed | 14 cm/s | 13 cm/s |
| Max. door width | 5000 mm | 3000 mm |
| Max. door surface | 11.25 m ² | 8 m ² |

1 Convenient querying of the door position

You can use the optional HS 5 BS hand transmitter at any time to check if your garage door is closed (not for ProMatic Akku).

2 Additional opening height

With the individually adjustable second opening height you can ventilate your garage without opening the door completely (not for ProMatic Akku).

3 Operator light

The LED lighting with energy efficiency class A++ illuminates during door travel.

As standard with two, 4-button hand transmitters HSE 4 BS black textured surface with plastic caps.

ProMatic Akku

If your garage does not have a power connection, the ProMatic Akku is the perfect solution for you. Depending on the frequency of daily door cycles you can operate your operator up to several weeks. Once the battery is empty, you can recharge it via a standard power outlet, for example over night. The optional solar module is particularly convenient. It charges the battery automatically. For further information, please see page 31.

As standard
for all garage
door operators

Only from Hörmann

Mechanical anti-lift kit in the operator boom

Automatic door locking in the operator boom

When the garage door is closed, the anti-lift kit **1** automatically engages in the guide rail stop. The door locks immediately and is secured against forced opening. This process is purely mechanical and thus also functions without a power supply!

Watch the video at: www.hormann.co.uk/videos

Exceptionally flat boom

An exceptionally flat boom of only 30 mm flat, **2** means that operators are easy to fit to any commercially available garage door and are therefore also ideal for retrofitting.

Emergency release from inside

During power failures, you can open the door conveniently from inside **3**.

Universal fitting bracket

The universal fitting bracket **4** fits all commercially available up-and-over and sectional doors.

Maintenance-free toothed belt

Reinforced with aramid fibres, the Kevlar toothed belt **5** is particularly tear-resistant and quiet-running. It does not require grease or lubricants, providing an important advantage over chain or spindle operators.

Automatic belt tension

The strong spring mechanism **6** tensions the toothed belt automatically, thus ensuring uniform, smooth running.

Compact unit

Hörmann's doors, operators and booms form a compact, permanently connected unit. Additional control units and exposed, movable connecting leads are not necessary.

Simple installation

Hörmann operators can be installed easily and quickly. Using the adjustable suspensions, you can fix the guide rails in a variety of ways: either to the ceiling or directly to the reinforced connection profile of the Hörmann sectional door (up to 3000 mm door width). An additional advantage: just one suspension is sufficient, even for long booms.

Centre installation

Centre installation of the operator rails on the door leaf results in uniform pull forces. No canting, no wear, which is frequently the case with e.g. operators installed on one side.

Easy fitting

For Hörmann sectional doors up to 3000 mm door width, the operator boom can simply be fitted on the connection profile of the door.

Special track application for hinged garage doors

Thanks to simple assembly of the optional track application, retrofitting is also very easy.

More comfort, more quality, more security

Only a remote-controlled Hörmann operator distinguished by proven technology makes your entrance gate truly convenient to operate. Thanks to the soft start and soft stop function, your door always runs evenly and smoothly. The obstacle detection function protects people and objects and gives you a feeling of safety. Useful additional functions round off your comfort, e.g. the automatic timer function that closes your door after a pre-defined period*, or the option to open the door only partially for people to pass through. The operators RotaMatic and VersaMatic are also available with a useful battery and optional solar panel.

* An optional photocell is required to use this function.

1

Safe

Thanks to the **automatic safety cut-out**, Hörmann entrance gate operators work reliably during all opening and closing phases. The gate stops immediately if it encounters an obstacle. Non-contact photocells detect persons or objects, providing additional safety. These can be easily and elegantly integrated into the safety key switch posts (see page 43) and placed near the entrance to monitor the area of travel of your hinged or sliding gate.

2

Reliable

Hörmann entrance gate operators open quietly and reliably thanks to the **soft start** and **soft stop** function. The gate opens without a jolt and gently brakes before fully closing. This protects the gate and operator and does not disturb your neighbours.

3 Robust

High-quality **entrance gate operators from Hörmann are decidedly robust, ensuring that they remain in good mechanical condition over the long run.** Weather-resistant and lasting material ensures long-term function. Our RotaMatic version also comes with integral heating for use in especially cold regions.

4 Certified

Hörmann entrance gate operators work safely during all opening and closing phases. The operating forces for common gate sizes **and fitting situations have been tested and certified by independent test institutes** in accordance with DIN EN 13241-1.

RotaMatic – the slim operator with an elegant appearance

Thanks to its modern, slimline design, Hörmann's RotaMatic hinged gate operator is the perfect partner for your beautiful hinged gate. Just like the design, the functional and safety features are also exemplary. You can enjoy the convenience of an operator even if there is no direct connection to the mains supply. The RotaMatic Akku makes it possible.

| Hinged gate operators | RotaMatic | RotaMatic P | RotaMatic PL | RotaMatic Akku |
|-----------------------|-----------|-------------|--------------|---|
| Special feature | | | | With 868 MHz fixed code (without door position query) |
| Cycles per day / hour | 20 / 5 | 40 / 10 | 40 / 10 | 5 / 2 |
| Max. door leaf width | 2500 mm | 2500 mm | 4000 mm | 2500 mm |
| Max. door leaf height | 2000 mm | 2000 mm | 2000 mm | 2000 mm |
| Max. weight | 220 kg | 400 kg | 400 kg | 120 kg |

1 Convenient querying of the door position

You can use the standard hand transmitter HS 5 BS at any time to check if your entrance gate is closed (not for RotaMatic Akku).

2 Partial opening

With double-leaf doors, only one door leaf can be opened for people to pass through.

Standard hand transmitter HSE 4 BS textured surface black with plastic caps

Standard hand transmitter HS 5 BS black textured surface

RotaMatic Akku

If there is no power outlet near your entrance gate, the powerful RotaMatic Akku is the perfect solution for you. This battery is securely stored in a lockable control cabinet; it is easy to transport and can be recharged in a matter of hours, for example over night. For maximum comfort we recommend the optional solar module: It charges the battery automatically. For further information, please see page 31.

VersaMatic – for special fitting situations

The hinged gate operator VersaMatic with integrated controls is the perfect solution even for unusual fitting situations. It is suitable for fitting on very low door pillars, for example. In addition, the fitting position is variable and can be optimally adjusted to each situation. Furthermore, no separate controls have to be installed – this saves time and space. The VersaMatic also features proven technology: its speed, for example, is individually adjustable; this way, it achieves smooth door travel for all door sizes.

| Hinged gate operators | VersaMatic | VersaMatic P | VersaMatic Akku Solar |
|-----------------------|------------|--------------|-----------------------|
| Cycles per day / hour | 20 / 5 | 40 / 10 | 5 / 2 |
| Max. door leaf width | 2000 mm | 3000 mm | 2000 mm |
| Max. door leaf height | 2000 mm | 2000 mm | 2000 mm |
| Max. weight | 200 kg | 300 kg | 120 kg |

1 Individually adjustable door travel speed

The speed and the soft start and soft stop functions can be individually adjusted. This ensures smooth door travel even with larger doors. In addition, warping of the door leaf during starting and stopping is prevented – all of this positively affects the service life of your door.

2 Convenient querying of the door position

You can use the standard hand transmitter HS 5 BS at any time to check if your entrance gate is closed.

3 Partial opening

With double-leaf doors, only one door leaf can be opened for people to pass through.

Standard hand transmitter
HS 5 BS black textured
surface

VersaMatic Akku Solar

The possibilities to supply the VersaMatic with power are just as versatile as the operator itself. If you don't have a power connection near your door, you can use the standalone VersaMatic Akku Solar. This powerful battery is securely stored in a separate housing. It is charged using the standard solar module. For further information, see page 31.

LineaMatic – a compact and reliable operator

Highlights of the sliding gate operator LineaMatic include its compact, height-adjustable housing made of zinc die-cast and glass-fibre reinforced plastic, as well as its reliable operator electronics.

| Sliding door operators | LineaMatic | LineaMatic P | LineaMatic H |
|-----------------------------|------------|--------------|--------------|
| Special feature | | | no radio |
| Cycles per day / hour | 20 / 5 | 40 / 10 | 40 / 10 |
| Max. door leaf width | 6000 mm | 8000 mm | 10000 mm |
| Max. door leaf height | 2000 mm | 2000 mm | 3000 mm |
| Max. weight | 300 kg | 500 kg | 800 kg |
| Max. self-supporting weight | 250 kg | 400 kg | 600 kg |

1 Convenient querying of the door position

You can use the standard hand transmitter HS 5 BS at any time to check if your entrance gate is closed (not for LineaMatic H).

2 Partial opening

With double-leaf doors, only one door leaf can be opened for people to pass through.

Standard hand transmitter HS 5 BS
black textured surface

STA 400 – for large and heavy gates

The sliding gate operator STA 400 is specifically designed for large gates. The matching control B 460 FU ensures precise door travel and smooth stopping.

| Sliding door operator | STA 400 |
|-----------------------------|----------|
| Special feature | no radio |
| Cycles per day / hour | 100 / 20 |
| Max. door leaf width | 17000 mm |
| Max. door leaf height | 3000 mm |
| Max. weight | 2500 kg |
| Max. self-supporting weight | 1800 kg |

For increased security

In many cases it makes sense to additionally increase the security of your entrance gate. With sound-absorbing seals you can reduce the risk of damage or injury; warning lights provide visual warning of door movements. Hörmann offers the perfect solution for all hinged or sliding gates.

Sound-absorbing seal

A sound-absorbing seal reduces the forces that arise during a collision with vehicles or people and thus also reduces damage or injuries. It is sold separately for hinged gates ¹ or sliding doors ². The operating forces for the operators RotaMatic, VersaMatic and LineaMatic with a sound-absorbing seal have been tested and certified for many door sizes and fitting situations by a recognised test institute.

³ Electric lock

Hinged gates are subjected to enormous forces under high wind loads. An additional electric lock secures them from being blown open.

⁴ Warning light

A warning light on your entrance gate provides you with extra security, day and night.

For increased independence

Even without a power outlet you do not have to forgo the convenience of a garage door or entrance gate operator: many Hörmann operators are available as an independent battery version. Depending on the frequency of daily door cycles, you can control the operator with the battery up to several weeks. Once the battery is depleted, you can recharge it via a power outlet, for instance over night. Or do you prefer a battery that recharges automatically? In this case, the optionally available solar module is the right solution for you.

1 Easy recharging

A practical carrying handle and its light weight make it easy to transport the battery for charging. The solar module makes recharging even more convenient – as standard with the VersaMatic Akku Solar*.

2 Solar module (optional)

A practical extension during battery operation takes over recharging. Delivery includes fitting material, 10 m connecting lead and charge controller, dimensions: 330 x 580 mm.

| | ProMatic Akku | RotaMatic Akku | VersaMatic Akku Solar including standard solar module |
|--------------------|--------------------|--------------------|---|
| Operation period** | circa 40 days | circa 30 days | circa 30 days |
| Charging time*** | circa 5 – 10 hours | circa 5 – 10 hours | circa 5 – 10 hours |
| Weight (in kg) | 8,8 | 8,8 | 8,8 |
| Dimensions (in mm) | 330 x 220 x 115 | 320 x 220 x 115 | 320 x 220 x 115 |

* With VersaMatic, the battery is non-removable and charging via a socket is not possible

** Based on an average of 4 door cycles per day and an ambient temperature of 20°C

*** Depending on the charge level

For even more comfort and security

Hörmann operator accessories are characterised by innovative technology, exclusive design and 100 % compatibility – the ideal combination for everyone who values perfection. You want maximum comfort?

We have the right control element for all your wishes and needs: elegant hand transmitters, stationary radio buttons or beautiful radio internal push buttons – choose your favourite.

With light and security accessories you can illuminate your entrance area and make garage door and entrance gate operation even more secure.

▼ Hand transmitter HSE 4 BS

The practical eyelet means you can fix the hand transmitter directly onto your key ring.

4 Basic version with support box for a photocell with height of 550 mm

5 Two optional photocells

6 An optional photocell and LED light module

LED light modules

You can choose between warm **7** and neutral **8** white light for light modules. The optional aluminium design screen creates a special accent **9**.

For more comfort in your home

Our perfectly matched products provide you with comprehensive solutions that make your life easier and more convenient.

For example, our elegant radio internal push buttons and hand transmitters control your garage and entrance gate operators as well as Hörmann radio electric socket with various electrical devices such as lights, household appliances etc.

Are your internal doors equipped with Hörmann PortaMatic operators? Then you can use those accessories to conveniently open and close your doors.

For additional information, consult the Door Operator PortaMatic brochure.

Recessed radio transmitter

For two functions, for recessed buttons, central installation in the house within sight of the garage door

HSU 2 BS: for switch boxes with 55 mm Ø with connection to the house mains supply

FUS 2 BS: for switch boxes with 55 mm Ø including 1.5 V battery

Radio internal push button FIT 1 BS

1 button function with large button for simple operation

Radio internal push button FIT 4 BS

4 button functions

Radio internal push button FIT 5 BS

Radio receiver electric socket FES 1 BS

For switching lights and other devices on and off up to 2500 watt

FES 1-1 BS

For controlling (impulse) operators of other makes and switching lights and other devices on and off up to 2500 watt

Make your home SMART

The BiSecur SmartHome radio system offers modern comfort – completely independent of time or place. All you need for this are the Hörmann Gateway and the free BiSecur app. With that, you can control your garage door or entrance gate conveniently from anywhere around the globe, operate your lamps or other devices with Hörmann channel socket receivers while being out of the house or query the position of your gates or the locking state of your entrance door while on the go – easily, conveniently and securely via your smartphone or tablet.

* To use this function it is required that your Hörmann entrance door ThermoCarbon / ThermoSafe is equipped with the automatic lock S5 / S7 Smart.

For additional information, see the BiSecur SmartHome brochure.

BiSecur Gateway

A central control unit for your operators and radio receivers, for up to 10 users, up to 16 functions per user

BiSecur app

Free download from the App Store or via Google Play

For a choice of direction "Open – Stop – Close" directions on different buttons of a control element, for SupraMatic operator*

Receiver HER 1

Receiver (1, 2 or 4 channels) to operate an additional external light or a garage door (of other make) using Hörmann radio accessories

* SupraMatic from year of manufacture 2014 onwards, serial version CI

Optimum ventilation of the garage can effectively prevent mould

It is very important to ventilate the garage regularly; especially if insulated garage doors are fitted in poorly insulated garages. The climate sensor automatically regulates the right ventilation. It automatically opens the door if humidity in your garage is too high. The door is automatically closed once humidity in the garage has been regulated again.

1

2

1 Inside climate sensor HKSI for automatic garage ventilation

- For monitoring humidity in the garage
- For automatic ventilation of the garage using the “2nd opening height” operator function
- If humidity is too high, the door automatically opens
- When humidity is adjusted, the door closes again automatically
- Adjustable temperature range in which the door does not open (e.g. if there is a risk of frost in the garage)
- Adjustable operating hours (e.g. overnight shut-off)
- Adjustable opening hours (e.g. max. 2 hours per ventilation)
- Possible upgrade with exterior sensor HKSA 2: measures the humidity outside and prevents the door from opening in case of high humidity levels
- Possible upgrade with an on-site fan for fast and effective ventilation
- For operator SupraMatic 3 (from Index C) and operator WA 300 S4 (from Index D)

3

3 Ventilation slot on the topmost section for sectional garage doors

- Ventilation slot through optional folding roller bracket on the top section
- Bottom door section remains sealed on the ground, thus offering protection against small animals or leaves
- Can be operated at the push of a button via the “2nd opening height” operator function
- Optionally available for all sectional garage doors LPU 67 Thermo, LPU 42* with operator
- All sectional garage doors LPU 42* can be retrofitted with operator SupraMatic** or ProMatic**

* Only track application N, L, Z

** From year of manufacture 2012

For more detailed information, please see the Sectional Garage Door brochure.

1

1 Emergency battery HNA for garage door operators

With this emergency power, you can bypass network power failures for up to 18 hours and max. 5 door cycles. The emergency battery recharges itself during normal operation. Emergency batteries can be added to all current Hörmann garage door operators.

2

2 Emergency battery HNA Outdoor for entrance gate operators

The RotaMatic and VersaMatic hinged door operators, and LineaMatic sliding door operator can also be equipped with an emergency power supply to bridge power failures. They can be universally fitted to the wall or floor.

Additional emergency release

For garages without a second entrance, we offer you the following options to open your door from the outside in case of emergency (e.g. power failure):

3

3 Sectional door without handle

You can choose between the emergency release lock with round cylinder (cannot be integrated in the home locking system) and the emergency release handle in 8 versions including lock (can be integrated in the home locking system).

4

4 Hinged or sectional door with handle

Emergency release (not shown)

5 Photocell

Hörmann's reliable one-way photocell systems immediately stop the door if the light beam is interrupted. They can be directly fitted to the door or integrated in STL key switch posts.
