

Overview of preset end-of-travel positions:

- Factory preset upper and lower end-of-travel positions for tubular drives with mechanical end-of-travel adjustment
- Available in all size ranges for RollMatic T tubular drives with mechanical end position adjustment
- Minor fine adjustment required on site at the construction project
- **At no surcharge**
- **Aim:** Reduction of assembly time and sources of error
- **Note:** For the order option with belt assembly, the additional rotations required on the shaft have not yet been implemented for technical data reasons. We are working on implementing the preset end position setting for this order option in the future.
